V. – Grape varieties

1 – Grape varieties

a) – The red wines come from the following varieties:

- main variety: pinot noir N;

- accessory varieties: chardonnay B and pinot gris G.

b) – The white wines come from the chardonnay B and pinot gris G varieties.

2 – Proportion rules on the holding

For the red wines, the accessory varieties are authorised only as mixed plantings within the vines, and their total proportion is limited to 15 % within each parcel.

VI. – Management of the vineyard

1 – Training methods

a) – Planting density

The vines have a minimum planting density of 8,000 plants per hectare, with a spacing between rows that may not exceed 1.40 metres and a spacing between plants within the same row that may not be less than 0.80 metre.

b) – Pruning rules

The red wines come from vines pruned according to the following provisions:

- either short pruning (vines trained as Royat cordon and fan): each plant bears four spurs, each with a maximum of 2 free eyes. Each plant may not bear more than 8 free eyes. Cordons are rejuvenated in such a way that in no case does the total number of free eyes per plant exceed 8;

- or long pruning (vines trained in single Guyot): each plant bears a single cane with a maximum of 6 free eyes and one spur with 2 free eyes. Each plant may not bear more than 8 free eyes.

The white wines come from vines pruned according to the following provisions:

- either short pruning (vines trained as Royat cordon): each plant bears 5 spurs, each with a maximum of 2 free eyes. Each plant may not bear more than 10 free eyes. Cordons are rejuvenated in such a way that in no case does the total number of free eyes per plant exceed 10;

- or long pruning (vines trained in single Guyot): each plant bears a single cane with a maximum of 6 free eyes and two spurs with 2 free eyes, or a single cane with a maximum of 8 free eyes and a single spur with 2 free eyes. Each plant may not bear more than 10 free eyes.

Whatever the pruning method, the vines may be pruned with additional free eyes provided that, at the phenological stage corresponding to 11 or 12 leaves, the number of fruit-bearing shoots of the year per plant is less than or equal to the number of free eyes defined in the pruning rules.

c) – Trellising and foliage height rules

- The vines must be trellised and the trellising is maintained.

- The height of trellised foliage must be at least equal to 0.6 times the spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, set at least 0.30 metre above the ground, and the upper trimming limit, set at least 0.20 metre above the upper trellising wire.

d) – Average maximum load per parcel

The average maximum load per parcel is set at:

- 9,000 kilograms per hectare for the red wines;

- 10,500 kilograms per hectare for the white wines.

e) – Threshold of missing vines

The percentage of dead or missing vine plants referred to in Article D. 644-22 of the Rural Code is set at 20 %.

f) – Cultivation condition of the vine

The parcels are managed so as to ensure a good overall cultivation condition of the vine, reflected in particular by:

- control of a good sanitary condition, making it possible to obtain healthy foliage and healthy berries;

- upkeep of the soil, namely control of grass cover by a grass height of less than half the trellising height (height between the ground and the upper trellising wire), and control of erosion through the absence of visible roots.

2 – Other cultivation practices

a) – In order to preserve the characteristics of the soils, which constitute a fundamental element of the terroir:

- Permanent grass cover of the headlands is compulsory.

- Any substantial modification of the morphology, the subsoil, the arable layer or the structuring elements of the landscape of a parcel intended for the production of the controlled designation of origin is prohibited, with the exception of classic deep-ploughing works.

b) – Vine plantings and replacements may only be made with healthy plant material that has undergone hot-water treatment or any other method making it possible to combat flavescence dorée.

3 – Irrigation

Irrigation is prohibited.

VII. – Harvest, transport and ripeness of the grapes

The name of the registered lieu-dit is entered immediately after the name of the controlled designation of origin and printed in characters whose dimensions, both in height and in width, are not larger than half those of the characters making up the name of the controlled designation of origin.

CHAPTER II

I. – Declaration obligations

1. Claim declaration

The claim declaration must be sent to the defence and management body at least fifteen days before circulation between authorised warehousekeepers and at the latest on 1 December of the year of harvest.

It indicates in particular:

- the name and address of the applicant;

- the place of storage of the wine.

It is accompanied in particular by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

2. Declaration prior to transaction and collections

Every operator wishing to sell in bulk a wine benefiting from the controlled designation of origin must make a transaction declaration for the lot concerned to the approved control body within time limits set in the control or inspection plan of between six and fifteen working days before any collection.

This declaration, accompanied where applicable by a copy of the purchase contract, specifies in particular:

- the identity of the operator;

- the EVV or SIRET number;

This declaration may also be drawn up for lots already packaged, within minimum time limits set in the control or inspection plan of between six and fifteen working days before the lots concerned are dispatched from the operator's cellars.

It specifies in particular:

- the identity of the operator;

- the EVV or SIRET number;

5. Fallback declaration

Every operator marketing a wine benefiting from the controlled designation of origin under a more general appellation must declare it to the defence and management body and to the approved control body:

- at the same time as the declaration prior to transaction, if the wine is the subject of a bulk transaction after the fallback;

- at the same time as the packaging declaration, if the wine is packaged after the fallback;

- within time limits set in the control or inspection plan of between six and fifteen working days following the recording of the fallback in the wine register, if the wine is the subject of a fallback after packaging.

The defence and management body and the approved control body inform, respectively and without delay, the defence and management body of the more general appellation concerned and the approved control body for the more general appellation concerned.

6. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin sends the defence and management body and the approved control body a quarterly summary.

7. Declaration of equipment for TSE

Every operator holding a concentration apparatus must declare it upon purchase to the defence and management body, specifying its specifications. The defence and management body keeps an up-to-date list of operators holding such equipment and sends it each year to the National Institute of Origin and Quality at the latest on 1 September.

Every operator using a service provider declares it to the defence and management body, which draws up the list of these operators and sends it each year to the National Institute of Origin and Quality at the latest on 1 September.
