VI. – Management of the vineyard

1° – Training methods

a) – Planting density

GENERAL PROVISIONS	
The vines have a minimum planting density of 7,000 plants per hectare. These vines have a spacing between rows less than or equal to 1.80 metres and a spacing between plants within the same row greater than or equal to 0.80 metre.	
PARTICULAR PROVISIONS	
Vines planted on sandy slopes: – parcels with an average slope greater than or equal to 15 %; – soil with a sand content greater than or equal to 30 %. Vines planted on slopes other than sandy ones: parcels with an average slope greater than or equal to 25 %.	The vines have a minimum planting density of 5,000 plants per hectare. These vines have a spacing between rows less than or equal to 2.20 metres and a spacing between plants within the same row greater than or equal to 0.80 metre.

b) – Pruning rules

The vines are pruned according to the following techniques:

COLOUR OF THE WINES	PRUNING RULES
Red and rosé wines	Either short pruning (vines trained as Royat cordon and fan), with a maximum per plant of 8 free eyes and of 4 spurs each bearing a maximum of 2 free eyes. When cordons are rejuvenated, the maximum number of free eyes per plant is 8. Or single Guyot long pruning, with a maximum per plant of 8 free eyes, of which 6 free eyes on the cane and 1 spur with 2 free eyes.

COLOUR OF THE WINES	**PRUNING RULES**
White wines	Either short pruning (vines trained as Royat cordon), with a maximum per plant of 10 free eyes and of 5 spurs each bearing a maximum of 2 free eyes. When cordons are rejuvenated, the maximum number of free eyes per plant is 10. Or single Guyot long pruning, with a maximum of 10 free eyes per plant, namely a cane bearing a maximum of 6 free eyes and 2 spurs with a maximum of 2 free eyes, or a cane bearing a maximum of 8 free eyes and 1 spur with a maximum of 2 free eyes. Or the so-called "taille à queue du Mâconnais", with a maximum of 14 free eyes per plant, including a cane bearing a maximum of 12 free eyes and 1 spur with 2 free eyes. The tip of the cane is tied to the lower trellising wire.
Whatever the pruning method, the vines may be pruned with 4 additional free eyes per plant provided that, at the phenological stage corresponding to 11 or 12 leaves, the number of fruit-bearing shoots of the year per plant is less than or equal to the number of free eyes defined in the pruning rules.	

c) – Trellising and foliage height rules

- When the vines are not trained in gobelet, they must be trellised and the trellising must be maintained.

- The height of trellised foliage must be at least equal to 0.6 times the spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, set at least 0.30 metre above the ground, and the upper trimming limit, set at least 0.20 metre above the upper trellising wire.

2° – Other cultivation practices

a) – In order to preserve the characteristics of the soils, which constitute a fundamental element of the terroir:

- Permanent grass cover of the headlands is compulsory.

- Any substantial modification of the morphology, the subsoil, the arable layer or the structuring elements of the landscape of a parcel intended for the production of the controlled designation of origin is prohibited, with the exception of classic deep-ploughing works.

Wines for which, under the terms of the present specification, the controlled designations of origin "Mâcon", "Mâcon" followed by the term "Villages", or "Mâcon" followed by a geographical denomination are claimed and which are presented under the said appellation may not be declared after the harvest, offered to the public, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid controlled designations of origin are entered, accompanied by the words "Appellation d'origine contrôlée", the whole in very conspicuous characters.

2° – Particular provisions

a) – The name of the geographical denomination follows the name of the controlled designation of origin and is written on the labels in characters whose dimensions are identical to those of the characters of the name of the controlled designation of origin.

b) – Wines eligible for the term "primeur" or "nouveau" must be presented with the indication of the vintage.

CHAPTER II

I. – Declaration obligations

1. Prior declaration of parcel assignment

Each operator declares to the defence and management body the list of parcels assigned to the production of the controlled designation of origin "Mâcon" followed by a geographical denomination before 31 March preceding the harvest. This declaration is renewed by tacit renewal unless the operator reports changes before 31 March preceding each harvest.

This declaration specifies:

- the identity of the operator;

- its EVV or SIRET number;

- the cooperative cellar(s) to which it may deliver;

- for each parcel: the cadastral reference, the area and the grape variety.

2. Declaration of renunciation to produce

Before 15 May preceding the harvest, the operator declares to the defence and management body the parcels for which it renounces producing the controlled designation of origin. The defence and management body transmits this declaration as soon as possible to the approved control body.

3. Claim declaration

The claim declaration must be sent to the defence and management body at least fifteen days before circulation between authorised warehousekeepers or packaging, and at the latest on 1 December of the year of harvest.

This declaration specifies in particular:

- the designation claimed;

- the term "primeur" or "nouveau", or "Villages", or the name of the geographical denomination, where applicable;

- the volume of the wine;

- the EVV or SIRET number;

- the name and address of the applicant;

- the place of storage of the wine.

It is accompanied in particular by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

4. Declaration prior to transaction and collections

Every operator wishing to sell in bulk a wine benefiting from the controlled designation of origin must make a transaction declaration for the lot concerned to the approved control body within time limits set in the control or inspection plan of between six and fifteen working days before any collection.

This declaration, accompanied where applicable by a copy of the purchase contract, specifies in particular:

- the identity of the operator;

- the EVV or SIRET number;

- the identification of the lot;

- the volume of the lot;

- the identification of the containers;

- the identity of the buyer.

If collections are made for volumes smaller than those set out in the transaction declaration, the operator must inform the control body in writing.

5. Declaration of release for consumption

Each lot of wine intended to be released for consumption within the meaning of Article D. 644-36-I of the Rural Code must be the subject of a declaration of release for consumption to the approved control body within minimum time limits set in the control or inspection plan of between six and fifteen working days before release for consumption.

This declaration may also be drawn up for lots already packaged, within minimum time limits set in the control or inspection plan of between six and fifteen working days before the lots concerned are dispatched from the operator's cellars.

It specifies in particular:

- the identity of the operator;

- the EVV or SIRET number;

- the identification of the lot;

- the volume of the lot;

- the lot number for wines already packaged;

- the identification of the containers for non-packaged wines.

6. Declaration relating to the dispatch outside the national territory of a non-packaged wine

Every operator wishing to dispatch outside the national territory a non-packaged wine benefiting from the controlled designation of origin must declare it to the approved control body within time limits set in the control or inspection plan of between six and fifteen working days before any dispatch.

7. Fallback declaration

Every operator marketing a wine benefiting from the controlled designation of origin under a more general appellation must declare it to the defence and management body and to the approved control body:

- at the same time as the declaration prior to transaction, if the wine is the subject of a bulk transaction after the fallback;

- at the same time as the packaging declaration, if the wine is packaged after the fallback;

- within time limits set in the control or inspection plan of between six and fifteen working days following the recording of the fallback in the wine register, if the wine is the subject of a fallback after packaging.

The defence and management body and the approved control body inform, respectively and without delay, the defence and management body of the more general appellation concerned and the approved control body for the more general appellation concerned.

8. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin sends the defence and management body and the approved control body a quarterly summary.

9. Declaration of equipment for TSE

Every operator holding a concentration apparatus must declare it upon purchase to the defence and management body, specifying its specifications. The defence and management body keeps an up-to-date list of operators holding such equipment and sends it each year to the National Institute of Origin and Quality at the latest on 1 September.

Every operator using a service provider declares it to the defence and management body, which draws up the list of these operators and sends it each year to the National Institute of Origin and Quality at the latest on 1 September.

10. Planting or replanting of vine parcels on slopes at a minimum density of 5,000 plants per hectare

Before any planting or replanting, on slopes, of vine parcels at a minimum density of 5,000 plants per hectare, a declaration must be sent by the operator to the defence and management body at least four weeks before the planned start date of the works. The defence and management body transmits, without delay, a copy of this declaration to the approved control body.

11. Reworking of parcels

Before any development or any works liable to modify the morphology, the subsoil, the arable layer (including any addition of exogenous soil) or the structuring elements of the landscape of a parcel intended for the production of the controlled designation of origin, with the exception of classic deep-ploughing works, a declaration must be sent by the operator to the defence and management body at least 4 weeks before the planned start date of the works. The defence and management body transmits, without delay, a copy of this declaration to the services of the National Institute of Origin and Quality.

12. Derogatory system

Operators carrying out at least five transactions per week and/or at least forty-two preparations for release for consumption within the meaning of Article D. 644-36-I of the Rural Code per year may group their transaction, release-for-consumption and fallback declarations. In this case, they must provide the approved control body with their forecast of transactions, releases for consumption and fallbacks, then send the quarterly summary of all the declarations referred to in points 4, 5 and 7 above.

II. – Keeping of registers

1. General plan of the storage and vinification places

Every vinifying operator must keep up to date and available for the approved control body a general plan of the storage and vinification places, allowing in particular the number, designation and capacity of the containers to be identified.

2. TSE register

Every operator carrying out partial concentration of musts must keep an up-to-date TSE register including in particular:

- the identification of the initial lot (volume and potential alcoholic strength);

- the volume of water evaporated;

- the identification of the lot after concentration (volume and potential alcoholic strength).
