SPECIFICATION OF THE CONTROLLED DESIGNATION OF ORIGIN "VOUVRAY"

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may claim the controlled designation of origin "Vouvray", initially recognised by the decree of 8 December 1936.

II. – Geographical denominations and complementary terms

The name of the controlled designation of origin may be supplemented by the geographical denomination "Val de Loire" according to the rules fixed in the present specification for the use of this geographical denomination.

III. – Colour and types of product

The controlled designation of origin "Vouvray" is reserved for still, sparkling (mousseux) and semi-sparkling (pétillant) white wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification, the elaboration and the ageing of the still wines, and the harvesting of the grapes, the vinification, the elaboration, the ageing and the packaging of the sparkling and semi-sparkling wines, are carried out within the territory of the following communes of the Indre-et-Loire department (list established on the basis of the official geographic code of the year 2020): Chançay, Noizay, Parçay-Meslay, Reugny, Rochecorbon, Tours-Sainte-Radegonde, Vernou-sur-Brenne, Vouvray.

2° – Delimited parcel area

The wines come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the sessions of the competent national committee of 12 and 13 February 1992 and of 8 and 9 March 2006.

The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

3° – Immediate proximity area

The immediate proximity area, defined by derogation for the vinification, the elaboration and the ageing of the still wines and the vinification, the elaboration, the ageing and the packaging of the sparkling and semi-sparkling wines, is made up of a part of the territory of the following commune of Nazelles-Négron of the Indre-et-Loire department (established on the basis of the official geographic code of the year 2020): Nazelles-Négron (for the part of the territory to the north of departmental road no. 1 and to the west of departmental road no. 75).

V. – Grape varieties

1° – Grape varieties

a) – The wines come from the following varieties: - main variety: chenin B; - accessory variety: orbois B.

b) – Plantings and replantings carried out with the following clones of the chenin B variety are prohibited: 417 and 278.

2° – Proportion rules on the holding

The proportion of the orbois B variety is less than or equal to 5 % of the grape varieties.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density.
The vines present a minimum planting density of 6,000 plants per hectare, with a spacing between rows of 1.60 metre maximum. The spacing between plants within the same row is greater than or equal to 0.90 metre.

b) – Pruning rules.
- The vines are short-pruned with spurs, each arm bearing one or 2 spurs with a maximum of 2 free eyes (buds). At most one spur per plant may be pruned to a maximum of three free eyes. - The number of free eyes per plant is 10 on average, with a maximum of 13 free eyes per plant. - However, for vines less than 10 years old, the number of free eyes per plant is a maximum of 8. - “Free eye” means any eye detached by more than 5 millimetres from the crown.

c) – Trellising rules and foliage height.
The vines are compulsorily trained in the “raised single-plane trellising” mode. The height of the trellised foliage must be at least equal to 0.6 times the spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, established at least 0.30 metre above the ground, and the upper topping limit, established at least 0.20 metre above the upper trellising wire. The vegetation is maintained vertical.

d) – Average maximum load per parcel.
The average maximum load is fixed, per parcel, at 10,500 kilograms per hectare and, per plant, at 2 kilograms.

e) – Threshold for missing vines.
The percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 20 %.

f) – Cultivation condition of the vine.
The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of the soil.

2° – Other cultivation practices

a) – With the exception of replacements and from the date of 31 July 2009, new plantings of grafted vines are carried out with the Riparia Gloire de Montpellier rootstock or a rootstock of equivalent vigour, unless an analysis justifies the use of a rootstock resistant to chlorosis.

b) – In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir, a plant cover of the headlands is compulsory from 1 metre after the end-of-row anchors.

c) – The total chemical weeding of the parcel is prohibited.

d) – Sprayers that are not face-to-face and have non-directed jets (aero-convector turbines mounted on straddle tractors, or oscillating cannons) are prohibited. Where the slope of the parcel is greater than 20 %, the use of aero-convector turbines mounted on straddle tractors, or of oscillating cannons, may be authorised.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

The wines come from grapes harvested at proper ripeness. The start date of the harvest is fixed according to the provisions of Article 645-6 of the Rural and Maritime Fishing Code.

2° – Ripeness of the grapes

a) – Grapes presenting a sugar content lower than the following may not be considered as being at proper ripeness: - 178 grams per litre of must for the still wines; - 153 grams per litre of must for the base wines intended for the production of sparkling or semi-sparkling wines.

b) – Minimum natural alcoholic strength by volume. The wines present a minimum natural alcoholic strength by volume of: - 11 % for the still wines; - 9.5 % for the base wines intended for the production of

sparkling or semi-sparkling wines.

VIII. – Yields. – Entry into production

1° – Yield

a) – The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the still wines, at 52 hectolitres per hectare.

b) – The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the sparkling or semi-sparkling wines, at 65 hectolitres per hectare.

2° – Limit yield

a) – The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the still wines, at 65 hectolitres per hectare.

b) – The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the sparkling or semi-sparkling wines, at 78 hectolitres per hectare.

3° – Entry into production of young vines

The benefit of the controlled designation of origin may be granted to wines coming from:

- parcels of young vines only from the 2nd year following that in the course of which planting was carried out in place before 31 July;

- parcels of young vines only from the 1st year following that in the course of which grafting in place was carried out before 31 July;

- parcels of vines that have been top-grafted, at the earliest in the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages, in a specific place reserved for this purpose.

a) – Blending of the varieties. The wines come from the main variety alone or from a blend of grapes or wines in which the main variety is predominant. The wines may not come from the accessory variety alone.

b) – Analytical standards.

TYPE OF WINE	ANALYTICAL STANDARD AND STAGE AT WHICH THE VALUE APPLIES
Base wines intended for the production of sparkling and semi-sparkling wines	The wines present, before the addition of the tirage liqueur and the implementation of the second fermentation in bottle: - a minimum alcoholic strength by volume of 9.5 %; - a volatile acidity less than or equal to 15 milliequivalents per litre; - a total sulphur dioxide content less than or equal to 140 milligrams per litre.
Dry still wines	The wines present, after packaging: - a content of fermentable sugars (glucose + fructose) less than or equal to 8 grams per litre; - a total acidity content, expressed in grams of tartaric acid per litre, which is not lower, by more than 2 grams per litre, than the content of fermentable sugars (glucose + fructose).

c) – Oenological practices and physical treatments. - The sparkling or semi-sparkling wines, after the taking of the sparkle (“prise de mousse”), do not exceed, in the event of enrichment of the must, a total alcoholic strength by volume of 13 %; - The still wines do not exceed, after enrichment, a total alcoholic

strength by volume of 15 %. For these wines, the increase of the natural alcoholic strength by volume may not exceed a limit inversely proportional to the sugar content of the lot being enriched, defined as the difference between the value of 7.5 and the natural alcoholic strength by volume of the lot being enriched, divided by 2 [7.5 − (natural alcoholic strength by volume / 2)].

d) – Prohibited equipment. The use of the following is prohibited: - self-emptying harvest bins fitted with a vane pump; - continuous helical-screw presses; - vats of raw cement.

e) – Overall vat capacity. - Every operator demonstrates a vat capacity equivalent to 1.4 times the average volume produced under the controlled designation of origin over the last five years. - New operators demonstrate, for their first harvest, a vat capacity equivalent to the product of the yield referred to at 1° of point VIII for the sparkling and semi-sparkling wines by the area of vine harvested.

f) – Good overall condition of upkeep of the cellar (floor and walls) and of the equipment (hygiene). The cellar (floors and walls) and the vinification equipment present a good general condition of upkeep.

2° – Provisions by type of product

a) – The still wines undergo ageing at least until 15 January of the year following that of the harvest.

b) – The sparkling or semi-sparkling wines are elaborated exclusively by second fermentation in bottle. The tirage into bottles in which the taking of the sparkle takes place occurs from 1 January of the year following that of the harvest.

3° – Provisions relating to packaging

a) – For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging for the still wines, before disgorging for the sparkling and semi-sparkling wines. The analysis reports must be kept for a period of 6 months.

b) – The wines are elaborated and marketed in the bottles inside which the taking of the sparkle was carried out, with the exception of the wines sold in bottles of a volume less than or equal to 37.5 centilitres or greater than 150 centilitres.

4° – Provisions relating to storage

The operator demonstrates a suitable place for the storage of the packaged products.

5° – Provisions relating to the movement of products and to placing on the market for the consumer

a) – Date of placing on the market for the consumer. - At the end of the ageing period, the still wines are placed on the market for the consumer from 1 February of the year following that of the harvest; - The sparkling and semi-sparkling wines are placed on the market for the consumer at the end of an ageing period of at least 12 months from the date of tirage. - Where a “remise en cercle” (return to bulk of bottled lots) is carried out by an operator, the minimum ageing period is determined from the date of the new tirage into bottle.

b) – Period during which the wines may not move between approved warehouse keepers. - The base wines intended for the production of sparkling or semi-sparkling wines may move between approved warehouse keepers at the earliest on 15 December of the year of harvest. - The still wines may move between approved warehouse keepers at the earliest on 15 January of the year following that of the harvest. - The sparkling or semi-sparkling wines may move between approved warehouse keepers only at the end of a minimum period of 10 months from the date of tirage.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

In the vicinity of, and upstream from, the town of Tours, the geographical area of the controlled designation of origin “Vouvray” extends over a plateau cut by multiple valleys or dry combes ending in an often abrupt cliff over the valley of the Loire. The plateau presents a fairly marked relief with an altitude of

between 85 metres and 110 metres. The visitor may, in this tormented relief, discover cellars and troglodyte houses hollowed out of the yellow tuffeau cliffs of the valleys. A base of soft chalk (Turonian tuffeau) constitutes the framework of this plateau. Surmounted by clayey-siliceous elements of the Senonian, the Eocene and the Mio-Pliocene, this base is crowned by Quaternary silty deposits of aeolian origin. The geographical area brings together the territory of 8 communes, riparian to the river or in the immediate vicinity of the Val and the tributary combes.

The parcels precisely delimited for the harvesting of the grapes present soils arising from the erosion of the geological substratum forming the plateau, corresponding to the edge of the cliff overlooking the Loire, and to those of the valleys and combes that cut into it. These parcels are either located on the hillsides, with clayey-limestone soils, or located on the edges of the plateau, with clayey-siliceous soils. The climate of the geographical area is a degraded oceanic climate, at the crossroads of the oceanic and continental influences. The Loire exerts a role of thermal regulator, as do the valleys which drain the cold air of the hillsides. The summers generally know at least one annual heatwave episode of a few days. The precipitation is about 680 millimetres per year.

b) – Description of the human factors contributing to the link

According to legend, at the time of the foundation of the monastery of Marmoutier (372), which is situated on the territory of the commune of Sainte-Radegonde now attached to the town of Tours, Saint Martin is said to have introduced, in the 4th century, the varieties, still planted, and the vine-pruning techniques still in force in 2010. The gluttony of his donkey is said to have led to the discovery of the benefits of a short pruning for the vine.

From the beginning of the 13th century, the white varieties are reserved for the parcels situated on the hillsides and plateau edges presenting stony and limestone soils. Ancient texts attest that the chenin B variety, locally called “pineau de la Loire”, is the noble variety of the vineyard. Rabelais cites, in the 16th century, in his work “Gargantua”: “It is pineau wine. Oh the fine white wine! And upon my soul, it is nothing but wine of taffeta.” The “tuffeau”, a soft chalky material that constitutes the first outcropping geological bases of the plateau, is hollowed out into vast cellars, from the Roman period and until the 20th century. Used as vinification, sparkling-wine-elaboration, ageing and storage cellars, they thus constitute a factor favourable to the development of viticulture and to the trade of the wines.

The presence of the kings of France in the châteaux of the Touraine region in the 14th and 16th centuries greatly favours the development and the renown of the Touraine vineyard. Renowned “crus” of “Vouvray” belong to the crown of France and figure prominently at the table of the king. The Loire is then an ideal means of transport and the wines of “Vouvray” are, until the end of the 19th century, marketed towards the countries of the north of Europe thanks to the Dutch brokers.

The producers of “Vouvray” organise themselves quickly after the phylloxera crisis, and the first half of the 20th century sees the establishment of a succession of acts intended to defend and promote the wines. As early as 1906, the defence union, in charge of combating the unfair competition of a few unscrupulous merchants selling wines without quality coming from other regions under the name of “Vouvray”, is created. In 1929, a judgment establishes that only the wines produced on the territory of the communes of Vouvray, Vernou, Chançay, Noizay, Reugny, Rochecorbon and Sainte-Radegonde may benefit from the designation of origin “Vouvray”. In 1936, the controlled designation of origin “Vouvray” is recognised, with the same geographical area as that defined in 2010, for the different categories of wines. A wine confraternity, created in 1937, promotes it. With a production in constant development, the producers found, in 1953, the cellar of the producers of Vouvray, a cooperative cellar which is still, in 2010, a major player. In 2009, the area of planted vines is about 2,200 hectares, exploited by 165 operators. The production is divided between the still wines (about 50,000 hectolitres) and the sparkling and semi-sparkling wines (nearly 70,000 hectolitres elaborated).

2° – Information on the quality and characteristics of the products

Still wines

The dry still wines generally present, in their youth, fruity and floral aromas, which may, with age, give way to notes of evolution, such as honey or lime blossom. When they contain fermentable sugars, their complexity and their keeping potential are generally more important. The more marked notes of exotic

fruits, or the softer notes of dried fruits, are then not rare, and notes of grilled almonds, honey or quince often reveal themselves with time.

Sparkling wines

The sparkling wines, with a fine and light sparkle, are often characterised by notes of fruit or citrus, and by a brioche nuance that asserts itself with time.

Semi-sparkling wines

The semi-sparkling wines are distinguished by their lower carbon-dioxide content and their more discreet bubbles, less present on the palate. These wines, agreeable, generally present a more vinous character than the sparkling wines.

3° – Causal interactions

Sparkling and semi-sparkling wines

The production of the sparkling wines is set in the same context as the still wines. Observing that wines bottled in the cellars sometimes tended to naturally re-ferment there, the winegrowers wished both to master this phenomenon of the "natural sparklers" and to take advantage of it. The wines offered to the consumer as "semi-sparkling" are thus born from the 19th century. Taking advantage of the bases of the nascent oenology, the first trials of elaboration of sparkling wines by the traditional method begin in the course of the 1840s. The presence of cellars hollowed out of the "tuffeau" then constitutes a factor favourable to the development of the elaboration of these wines, which requires vast tempered spaces of storage and handling. Strong with the experience acquired over more than a century, the elaborators of sparkling wines possess, in 2010, a perfectly mastered know-how in the composition of their cuvées. The ageing "on laths" of at least 12 months contributes to developing the aromas and the complexity of the wines.

Still wines

The geographical area of "Vouvray", situated at the climatic limit of cultivation of the chenin B variety — a noble variety of the "Val de Loire", but also a late variety — presents privileged natural situations that are reflected, in the wines, by an original aromatic expression and a remarkable balance. The elegance and the original expression of the wines impose an optimal management of the vigour and of the production potential, reflected in the use of a rootstock of low vigour, a rigorous training of the vine and a short pruning. The vintage effect, particularly marked within the geographical area, has led the operators, over the generations, to manage the various conditions of ripeness of the grapes. Thus, according to the situations and the climatic conditions of the year, the harvested grapes will be more or less rich in sugar. The respect of this natural richness leads to the production of different types of wines. When the climatic conditions of the harvest are particularly favourable, wines with a high content of fermentable sugars are produced from the richest grapes harvested after concentration by raisining on the stock ("passerillage sur souche") or affected by noble rot under the action of Botrytis cinerea.

Reflecting the usages, the delimited parcel area for the harvesting of the grapes classifies only the parcels presenting soils with a good water and thermal behaviour. The choice of the parcels for the cultivation of the vine, the adaptation and then the constancy of the production usages put in place by the winegrowing community over the generations, explain the quality and the originality of the wines of "Vouvray". The reputation of the wines of "Vouvray" is very great as early as the 13th century, the monks contributing to the expansion of the vineyard and to the diffusion of its wines by the Loire shipping. The 16th and 17th centuries, with the activity of the Dutch brokers, see this reputation grow both abroad and in France, and the wines are, in 2010, marketed outside the national territory or exported throughout the world.

XI. – Transitional measures

1° – Delimited parcel area

On a transitional basis, the parcels planted with vine excluded from the delimited area of the controlled designation of origin, identified by their cadastral references, their area and their grape varieties, and the list of which was approved by the competent national committee of the National Institute of Origin and

Quality at the sessions of 12 and 13 February 1992, provided that they meet the conditions fixed by the present specification, continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up and at the latest until the 2021 harvest inclusive.

2° – Immediate proximity area

On a transitional basis, the vinification, the elaboration and the ageing of the still wines may be carried out until the 2013 harvest inclusive on the territory of the commune of Montlouis-sur-Loire, in the Indre-et-Loire department.

2° – Training methods

The vine parcels in place on 9 September 1987 and not respecting the provisions relating to planting density fixed in the present specification continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up, subject to compliance with the trellising and foliage-height rules fixed in the present specification.

3° – Rootstock

The vine parcels in place on 31 July 2009 and planted with a rootstock other than the Riparia Gloire de Montpellier continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up.

4° – Other cultivation practices

The spraying equipment that is not face-to-face and has non-directed jets (aero-convector turbines mounted on straddle tractors, or oscillating cannons) is authorised until 31 August 2024.

XII. – Rules of presentation and labelling

Particular provisions

a) – All the optional indications are entered, on the labels, in characters whose dimensions, both in height and in width, are not greater than double those of the characters composing the name of the controlled designation of origin.

b) – The dimensions of the characters of the geographical denomination “Val de Loire” are not greater, both in height and in width, than two-thirds of those of the characters composing the name of the controlled designation of origin.

c) – The term “sec” (dry) figures compulsorily on the labelling of the still wines meeting the provisions of point IX (1°, b).

d) – The presentation of the bottle of semi-sparkling wine must not give rise to confusion with that of the bottle of sparkling wine. The cork is different from that used for the bottle of sparkling wine. The cork may be held by a tie, but is not covered by a cap. The over-corking does not exceed 9 centimetres in total height. The use of a neck-band or of any other additional dressing lengthening the over-corking is prohibited.

e) – The labelling of the wines benefiting from the controlled designation of origin may specify the name of a smaller geographical unit, provided that: - it is a registered cadastral lieu-dit; - it appears on the harvest declaration.

CHAPTER II

I. – Declaration obligations

1. Declaration of renunciation to produce

Every operator declares to the defence and management body, at the latest 72 hours before the harvest, the parcels for which it renounces to produce the controlled designation of origin. The defence and management body will transmit this information to the approved control body as soon as possible.

2. Claim declaration for the still wines and claim declaration known as “of aptitude” for the base wines

The claim declaration for the still wines and the claim declaration of aptitude for the base wines intended for the elaboration of sparkling and semi-sparkling wines must be sent to the defence and management body before 30 November of the year of harvest. It indicates in particular: - the designation claimed; - the volume of the wine; - the EVV or SIRET number; - the name and address of the operator; - the place of storage of the wine. It is accompanied by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

3. Claim declaration for the sparkling and semi-sparkling wines

The claim declaration must be sent to the defence and management body simultaneously with the declaration of end of tirage subscribed with the local services of the DGDDI. It indicates in particular: - the designation claimed; - the volume of base wine or still wine used; - the volume of the wine, expressed in number of bottles; - the EVV or SIRET number; - the name and address of the operator; - the place of storage of the wine. It is accompanied by an extract of the stock accounts for buyers of grapes, musts, base wines or still wines.

4. Prior declaration of transactions

Every operator must declare each bulk transaction to the approved control body within time limits fixed in the control or inspection plan, which may not exceed fifteen working days before the operation. This declaration, accompanied where applicable by a copy of the purchase contract, specifies in particular: - the identity of the operator; - the EVV or SIRET number; - the name of the appellation and the colour; - the identification of the lot; - the volume of the lot; - the identification of the containers; - the identity of the buyer.

5. Prior declaration of packaging

a) – Every operator packaging a wine of the controlled designation of origin, not demonstrating a certified system of traceability and of sample conservation, must make, to the approved control body, a packaging declaration, at the latest within the 24 hours following the completion of the packaging of the lot(s) of wine.

b) – Every operator packaging a wine of the controlled designation of origin, demonstrating a certified system of traceability and of sample conservation, must keep a special register recording each packaging according to the arrangements fixed in the control or inspection plan.

6. Declaration relating to the dispatch outside the national territory of a non-packaged wine

Every operator wishing to carry out a dispatch outside the national territory of a non-packaged wine benefiting from the controlled designation of origin must declare it to the approved control body within time limits fixed in the control or inspection plan, which may not exceed fifteen working days before any dispatch.

7. Fallback (repli) declaration

Every operator marketing a wine benefiting from the controlled designation of origin under a more general appellation must declare it to the defence and management body and to the approved control body at least fifteen days before this fallback.

8. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin sends to the defence and management body and to the approved control body a downgrading declaration at the latest on the 20th of the month following the day of the downgrading(s) carried out. It indicates in particular: - the name of the appellation and the type of product concerned; - the identity of the operator and its EVV or SIRET number; - the volume of wine downgraded; - the balance of volume remaining claimed under the controlled designation of origin for the type of product concerned.

9. Declaration of "remise en cercle"

Any "remise en cercle" is the subject of a prior declaration at least 48 hours before the start of the operations to the approved control body. This prior declaration indicates in particular the nature, the volume and, where applicable, the vintage of the products used.

10. Declaration of acquisition of spraying equipment

Any acquisition of spraying equipment is the subject of a declaration to the ODG (defence and management body). This declaration indicates in particular the precise description of the equipment acquired. It is accompanied by the purchase invoice for the equipment.

II. – Keeping of registers

1. Ripeness-monitoring register

Every operator producing grapes intended for the production of wines of the controlled designation of origin keeps up to date a register on which is specified the potential alcoholic strength by volume before harvest for at least 2 identified plots representative of the holding.

2. Vinification register

Every operator vinifying wines of the controlled designation of origin keeps up to date a register on which is recorded, per vinification lot: - the natural alcoholic strength by volume and, where applicable, the level of enrichment; - the oenological practices; - the following analytical parameters, after fermentation: total alcoholic strength by volume and content of fermentable sugars (glucose and fructose).

3. Register of tirage into bottle, of taking of the sparkle and of disgorging

Every operator elaborating sparkling or semi-sparkling wines liable to benefit from the controlled designation of origin keeps up to date a register on which is indicated in particular: - the date of tirage; - the lot number; - the number of bottles put to tirage; - the place of storage of the bottles intended for the taking-of-the-sparkle operation; - the date of disgorging.

4. Packaging register

Every operator packaging still wines liable to benefit from the controlled designation of origin keeps up to date a register on which is indicated: - the date of packaging; - the volume packaged; - the lot number; - the number of bottles or other containers.

5. Vines under transitional provisions

a) – Every operator exploiting vines in place on 9 September 1987, and not respecting the provisions relating to planting density fixed in the present specification, keeps up to date a register on which is indicated, for the parcels concerned: - the cadastral reference; - the area; - the year of planting; - the variety; - the planting density; - the spacings on the row and between the rows.

b) – Every operator exploiting vine parcels in place on 31 July 2009 and not respecting the provisions relating to the rootstock fixed in the present specification keeps up to date a register on which is indicated, for the parcels concerned: - the cadastral reference; - the area; - the year of planting; - the variety; - the rootstock; - the planting density; - the spacings on the row and between the rows.

CHAPTER III

I. – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A1 – Belonging of the planted parcels to the delimited area and monitoring of the transitional measures	Documentary check (up-to-date CVI record) and check in the field
A2 – Claimable production potential (grape varieties and proportion rules, monitoring of transitional measures, planting density and trellising)	Up-to-date keeping of the production potential, according to arrangements fixed in the control or inspection plan
Grape varieties and proportion rules on the holding, monitoring of transitional measures	Documentary check

Planting density	Documentary check and in the field
Trellising rules	Check in the field
A3 – Processing, ageing, packaging and storage facilities	
Suitable place for the vinification and suitable premises for the storage of the packaged products	Declarative and documentary check on site
Overall vat capacity	Visual check on site and documentary check on site
B – RULES LINKED TO THE PRODUCTION CYCLE	
B1 – Management of the vineyard. — Pruning	Check on site; counting of the number of free eyes per plant
Trellising	Check on site; measurement of the trellised-foliage height
Average maximum load per parcel	Counting of bunches and estimation of the load from an indicative table drawn up for this purpose (variety/weight/bunches/density)
B2 – Harvest, transport and ripeness of the grapes. — Ripeness of the grapes	Documentary check on site and check on site; verification of the records (ripeness checks) carried out by the operators
Harvest date	Checks in the field and monitoring of the derogations
B3 – Processing, elaboration, ageing, packaging, storage. — Enrichment	Documentary check and check on site; verification of the records carried out by the operators for all the vinification lots (vinification register)
Second fermentation in bottle (sparkling and semi-sparkling wines)	Documentary check and check on site; verification of the records carried out by the operators (register of tirage into bottle, of taking of the sparkle and of disgorging)
B4 – Harvest declaration and claim declaration. — Authorised yield	Documentary check (check of declarations), monitoring of the authorised derogations
C – CHECKS ON THE PRODUCTS	
Non-packaged wines that are the subject of a transaction between operators, including the base wines for sparkling and semi-sparkling wines	Analytical and organoleptic examination
At the stage of placing on the market for the consumer (non-packaged still wines)	Analytical and organoleptic examination
Sparkling or semi-sparkling wines after taking of the sparkle and before disgorging	Analytical and organoleptic examination
Packaged still wines	Analytical and organoleptic examination
Non-packaged wines intended for a dispatch outside the national territory	Analytical and organoleptic examination of all the lots

II. – References concerning the control structure

The check of compliance with the present specification is carried out by a third-party body offering guarantees of competence, impartiality and independence, under the authority of the INAO, on the basis of an approved inspection plan.

The inspection plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations. The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
