SPECIFICATION OF THE CONTROLLED DESIGNATION OF ORIGIN "POUILLY-FUMÉ" OR "BLANC FUMÉ DE POUILLY" AND OF THE CONTROLLED DESIGNATION OF ORIGIN "POUILLY-SUR-LOIRE"

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may claim the controlled designation of origin "Pouilly-Fumé" or "Blanc Fumé de Pouilly" and the controlled designation of origin "Pouilly-sur-Loire", initially recognised by the decree of 31 July 1937.

II. – Geographical denominations and complementary terms

The name of the controlled designation of origin may be supplemented by the complementary geographical denomination "Val de Loire" according to the rules fixed in the present specification for the use of this complementary geographical denomination.

III. – Colours and types of product

1° – The controlled designation of origin "Pouilly-Fumé" or "Blanc Fumé de Pouilly" is reserved for still white wines.

2° – The controlled designation of origin "Pouilly-sur-Loire" is reserved for still white wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification, the elaboration and the ageing of the wines are carried out within the territory of the following communes of the Nièvre department: Garchy, Mesves-sur-Loire, Pouilly-sur-Loire, Saint-Andelain, Saint-Laurent-l'Abbaye, Saint-Martin-sur-Nohain, Tracy-sur-Loire (list established on the basis of the official geographic code of the year 2020).

2° – Delimited parcel area

The wines come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the session of the competent national committee of 28 and 29 May 1986.

The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

3° – Immediate proximity area

The immediate proximity area, defined by derogation for the vinification, the elaboration and the ageing of the wines, is made up of the territory of the following communes on the basis of the official geographic code of the year 2020:

Cher department: Bannay, Bué, Crézancy-en-Sancerre, Jalognes, Menetou-Râtel, Ménétréol-sous-Sancerre, Montigny, Neuvy-deux-Clochers, Saint-Satur, Sainte-Gemme-en-Sancerrois, Sancerre, Sury-en-Vaux, Thauvenay, Veaugues, Verdigny, Vinon

Loiret department: Beaulieu-sur-Loire, Bonny-sur-Loire, Briare, Gien, Ousson-sur-Loire, Saint- Brisson-sur-Loire, Thou

Nièvre department: Alligny-Cosne, Bulcy, Cosne-Cours-sur-Loire, La Celle-sur-Loire, Myennes, Neuvy-sur-Loire, Pougny, Saint-Loup, Saint-Père. Procédure nationale d'opposition suite à l'avis du Comité national des appellations d'origine relatives aux vins et aux boissons alcoolisées, et des boissons spiritueuses du 18 novembre 2021 3

V. – Grape varieties

The wines come from the following varieties:

CONTROLLED DESIGNATION OF ORIGIN	VARIETIES
“Pouilly-Fumé” or “Blanc Fumé de Pouilly”	sauvignon B.
“Pouilly-sur-Loire”	chasselas B.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density.
The vines present a minimum planting density of 6,000 plants per hectare. These vines present a spacing between rows less than or equal to 1.30 metre and a spacing between plants within the same row between 0.80 metre and 1.20 metre.

b) – Pruning rules.
The vines are pruned, before the phenological stage corresponding to 2 to 3 spread leaves, or stage 9 of the Eichhorn and Lorenz scale, according to the following techniques:

VARIETIES	PRUNING RULES
sauvignon B	- either in single Guyot with a maximum of 10 free eyes (buds) per plant, of which a maximum of 8 free eyes on the long cane, and one or 2 spurs with a maximum of 2 free eyes; - or by short pruning (trained in Royat cordon) with a maximum of 14 free eyes per plant, a single or double framework, bearing spurs with a maximum of 2 free eyes. The establishment period of the cordon is limited to a maximum of 4 years. During this period, single or double Guyot pruning, with a maximum of 8 free eyes on each long cane, is authorised. The rejuvenation of a vine parcel trained in Royat cordon may not exceed 20 % of the existing plants per year.
chasselas B	- either in single Guyot with a maximum of 10 free eyes per plant, of which a maximum of 8 free eyes on the long cane, and one or 2 spurs with a maximum of 2 free eyes; - or by short pruning (trained in Royat cordon) with a maximum of 14 free eyes per plant, a single or double framework, bearing spurs with a maximum of 2 free eyes. The establishment period of the cordon is limited to a maximum of 4 years. During this period, single or double Guyot pruning, with a maximum of 8 free eyes on each long cane, is authorised. The rejuvenation of a vine parcel pruned in Royat cordon may not exceed 20 % of the existing plants per year. - or by short pruning (trained in goblet or fan) with a maximum of 12 free eyes per plant with spurs pruned to a maximum of one or 2 free eyes.

c) – Trellising rules and foliage height.
- The trellising is carried out before the phenological stage corresponding to bunch closure, or stage 32 of the Eichhorn and Lorenz scale. - It comprises at least two lifting wires and a carrier wire for vines pruned in single Guyot or in Royat cordon, or two lifting wires for vines pruned in goblet or fan. - The lifting wires will be raised above the level of the bunches. - The height of the trellised foliage must be at least equal to 0.6 times the spacing between rows, the height of trellised foliage being measured between a point situated 0.10 metre below the bending wire and the stabilised topping height of the vegetation.

d) – Average maximum load per parcel.
The average maximum load per parcel is fixed at 10,500 kilograms per hectare.

e) – Threshold for missing vines.
- The percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 20 %. - For the vines whose initial planting density is greater than 8,000 plants per hectare, the percentage of dead or missing vine plants referred to in Article D. 645-4 of the Rural and Maritime Fishing Code is fixed at 30 %.

f) – Overall cultivation condition of the vine.
The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of its soil (in particular as regards the problems of erosion).

2° – Other cultivation practices

In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir:

a) – The slope corrections respect the profile of the soils in place and the morphology of the relief of the parcels; - Any substantial modification of the morphology of the subsoil, of the arable layer or of the elements ensuring the integrity and durability of the soils of a parcel intended for the production of the controlled designation of origin is prohibited, with the exception of classic deep-ploughing works.

b) – The plant cover of the headlands, embankments and ditches adjacent to the vine parcels is maintained permanently. - The permanent grassing of the perimeter of the parcels (headlands and unplanted or uncultivated inter-parcel spaces) is compulsory. This obligation does not apply in the event of restoration of the headlands, notably following erosion, or exceptional climatic phenomena. - The chemical weeding of the parcel is prohibited on a minimum of 25 % of the inter-row. - The chemical weeding of the parcel is prohibited between the phenological stage corresponding to véraison, or stage 36 of the Eichhorn and Lorenz scale, and 1 February of the year following that of the harvest.

3° – Irrigation

Irrigation is prohibited.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

The wines come from grapes harvested at proper ripeness. The start date of the harvest is fixed according to the provisions of Article D. 645-6 of the Rural and Maritime Fishing Code.

2° – Ripeness of the grapes

The sugar contents of the grapes and the natural alcoholic strengths by volume meet the following characteristics:

CONTROLLED DESIGNATION OF ORIGIN	**MINIMUM SUGAR CONTENT OF THE GRAPES (grams per litre of must)**	**MINIMUM NATURAL ALCOHOLIC STRENGTH BY VOLUME**
“Pouilly-Fumé” or “Blanc Fumé de Pouilly”	170	10.50 %
“Pouilly-sur-Loire”	153	9.50 %

VIII. – Yields. – Entry into production

1° – Yield

The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 65 hectolitres per hectare.

2° – Limit yield

The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 75 hectolitres per hectare.

3° – Entry into production of young vines

The benefit of the controlled designation of origin may be granted to wines coming from:

- parcels of young vines only from the 2nd year following that in the course of which planting was carried out in place before 31 July;

- parcels of young vines only from the 1st year following that in the course of which grafting in place was carried out before 31 July;

- parcels of vines that have been top-grafted, at the earliest in the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties

other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages.

a) – Analytical standards. The lots ready to be marketed in bulk, or at the packaging stage, present a content of fermentable sugars (glucose + fructose) less than or equal to 4 grams per litre. The lots ready to be marketed in bulk, or at the packaging stage, present a volatile acidity content less than or equal to 14.5 milliequivalents per litre. The lots ready to be marketed in bulk, or at the packaging stage, present a total SO2 content less than or equal to 150 mg per litre.

b) – Oenological practices and physical treatments. - Any thermal treatment of the harvest involving a temperature greater than 40 °C is prohibited, if it is followed by an immediate separation of the liquid and solid phases; - A thermal-regulation device is implemented for the vinification vats when they exceed a capacity of 30 hl; - The use of pieces of wood is prohibited; - The wines liable to benefit from the controlled designation of origin “Pouilly-Fumé” or “Blanc Fumé de Pouilly” do not exceed, after enrichment, a total alcoholic strength by volume of 13 %; - The wines liable to benefit from the controlled designation of origin “Pouilly-sur-Loire” do not exceed, after enrichment, a total alcoholic strength by volume of 12 %.

c) – Prohibited equipment. The use of the following is prohibited: - continuous presses; - horizontal plate presses fitted with chains and rings; - self-emptying harvest bins fitted with a centrifugal vane pump.

d) – Vat capacity. Every operator has a vinification vat capacity at least equal to 1.6 times the volume vinified on the basis of the base yield fixed at 1° of point VIII.

e) – Good overall condition of upkeep of the cellar (floor and walls) and of the equipment (hygiene). - The cellar (floors and walls) and the vinification equipment present a good general condition of upkeep. - The vinification equipment is free of apparent iron.

2° – Provisions by type of product

The wines undergo ageing on fine lees at least until 1 January of the year following that of the harvest.

3° – Provisions relating to packaging

For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging. The analysis reports must be kept for a period of 6 months from the date of packaging.

4° – Provisions relating to storage

The operator demonstrates a suitable place for the storage of the packaged wines.

5° – Provisions relating to the movement of products and to placing on the market for the consumer

a) – Date of placing on the market for the consumer. The wines are placed on the market for the consumer from 15 January of the year following that of the harvest.

b) – Period during which the wines may not move between approved warehouse keepers. The wines may move between approved warehouse keepers from 1 December of the year of harvest.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

Stretching over some twenty kilometres along the right bank of the Loire, the geographical area borders the south-east of the Paris Basin. Culminating at 270 metres, that is to say more than 100 metres above the valley, it offers a strongly contrasted landscape with deep, finger-like valleys, of general north-east/south-west orientations, that open onto the lower valley of the Loire. The vineyard is grouped over 7 communes around the butte of Saint-Andelain, the culminating point of the geographical area.

It extends over varied geological bases, and the parcels delimited and selected for the harvesting of the grapes are inscribed in this diversity. Notably favoured are: - The Kimmeridgian marls, or "terres blanches", which are encountered in the central part of the geographical area, on the communes of Pouilly-sur-Loire and Saint-Andelain: these are the most widely represented viticultural soils; - The Oxfordian limestones, which have given soils of strong stoniness, locally called "caillottes": they are very present in the north-east of the geographical area; - The "silex" (flints), more or less clayey residues that appeared following the powerful erosive phase of the Cretaceous, and present above all on the territory of the commune of Saint-Andelain; - The siliceous soils, more or less clayey, present essentially at the western extremity of the geographical area, on the commune of Tracy-sur-Loire.

The geographical area benefits from a degraded oceanic climate. The average annual precipitation is 600 millimetres and the Loire plays a preponderant role as a thermal regulator by draining the cold air of the perpendicular valleys.

b) – Description of the human factors contributing to the link

Traces of a nascent viticulture are found as early as the 5th century through the existence of a Gallo-Roman estate, "Pauliacum" (the Estate of Paulus). In 680, Bishop VIGILIUS bequeaths by testament, to the Abbey of Notre-Dame-d'Auxerre, his estate of Pouilly and its vines. A vestige and testimony of this period, the Roman road, which crosses the geographical area, also reflects the very ancient commercial activity. The vineyard then knows a veritable boom thanks to the monastic congregations, notably the Benedictines of La Charité-sur-Loire. On one of the hillsides that overlook the Loire, a parcel of about 4 hectares named "Loge aux Moines" bears witness to this period of expansion.

From the 16th century, the Loire and its boats facilitate the diffusion of the wines, and the opening of the Briare Canal, in 1642, linking the Loire to the Seine, orients the trade towards Paris. Wines of "Pouilly" then reach England, after having been traded at the Fairs of Rouen. Winegrowing confraternities of Saint-Vincent are created at the end of the 17th century. Throughout the 18th century, wine of "Pouilly" is dispatched to Montargis, Fontainebleau, Paris, Versailles. The vineyard, which covers 2,000 hectares, is then planted with various varieties: melon B, meslier Saint-François B, sauvignon B, chasselas B.

The second half of the 19th century is marked by the interruption of a large part of the wine production in favour of the production of table grapes (chasselas B) intended, by rail, for the poorly supplied Parisian market, until the phylloxera crisis of 1890. At the beginning of the 20th century, the sauvignon B variety, locally called "blanc fumé" — because at ripeness the grapes are covered with a grey bloom — quickly becomes the main variety within the vineyard.

In 1923, a judgment enshrines the use of the name of "Pouilly-Fumé" for the wines from the sauvignon B variety and of the name of "Pouilly-sur-Loire" for the wines from the chasselas B variety. The producers then organise themselves and create, in 1948, the cooperative cellar of Pouilly, then the confraternity of the "Baillis", whose aim is to make the wines of "Pouilly" better known. Since then, a large part of the production is marketed on the national territory and exported to more than 90 countries. In 2009, the production represents a volume of about 60,000 hectolitres for 1,250 hectares of vines exploited essentially by family businesses.

2° – Information on the quality and characteristics of the products

The wines benefiting from the controlled designations of origin "Pouilly-Fumé" and "Pouilly-sur-Loire" are dry, still white wines with a robe that may range from pale yellow to gold. The aromatic palette of the wines of "Pouilly-Fumé" may present fruity notes, recalling citrus, floral notes recalling white flowers, varietal notes and minerality. These wines express complexity, finesse, generosity and freshness. The wines of "Pouilly-sur-Loire" are smooth-drinking, frank and refreshing wines. They often present mineral notes, of white flowers, of dried fruits, with a certain roundness.

3° – Causal interactions

The conjunction of the degraded oceanic climate, of the situation sheltered from the west winds and of the proximity of the Loire which plays a determining role as a thermal regulator, gives this geographical area excellent climatic conditions for the cultivation of the sauvignon B and chasselas B varieties. The temperatures, thus attenuated during the vegetative cycle of the vine, ensure a regular ripeness of the grapes, while the alternation of hot days and fresh nights throughout the ripeness period of the grape preserves the freshness and develops the aromas of the wines.

This region, which has known deep changes over the centuries, has always preserved its viticultural traditions. The situations of high qualitative potential, where the vine very largely dominated the other crops over the last centuries, are still dedicated to viticulture. These usages are enshrined by the delimited parcel area, which classifies only the parcels presenting shallow soils, on often steep slopes. These situations impose an optimal management of the plant and of its production potential, reflected in a high planting density, in the training of the vine and in a rigorous pruning. This management illustrates the ancestral know-how of a human community attached to its winegrowing traditions and to its viticultural landscape, as testified by the persistence of the confraternities created as early as the 17th century.

This know-how is also expressed by the capacity of the elaborator, acquired from the experience of several generations, to reveal the originality and the richness of the natural environment: wines of “Pouilly-Fumé”, powerful on the “terres blanches” and with accents of citrus, elegant on the “caillottes” and with notes of white flowers, fresh on the “silex” with mineral and fresh finishes; and wines of “Pouilly-sur-Loire” all in finesse. The ageing of the wines reinforces their aromatic complexity. The white wines of “Pouilly-sur-Loire”, already revealed in the 12th century by the monks of La Charité-sur-Loire, then by Guy COQUILLE, deputy of the Third Estate in the 16th century, who notes that the wines of the region are present on the tables of the great of the kingdom, have never ceased to increase their notoriety. The international trade attached to them is an excellent illustration thereof.

XI. – Transitional measures

1° – Grape varieties

a) – The parcels or parts of vine parcels in place on 31 July 2009, planted with the sauvignon gris G variety, continue to benefit, for their harvest, from the right to the controlled designation of origin “Pouilly-Fumé” or “Blanc Fumé de Pouilly”, until they are grubbed up.

b) – The vine parcels in place on 31 July 2009, planted with the chasselas B variety, within which are present, as a mixture, plants of the sauvignon B variety, continue to benefit, for their harvest, from the right to the controlled designation of origin “Pouilly-sur-Loire”, until they are grubbed up.

2° – Training methods

a) – The vine parcels in place on 31 July 2009 whose spacing between plants within the same row is less than 0.80 metre or greater than 1.20 metre continue to benefit, for their harvest, from the right to the controlled designation of origin “Pouilly-Fumé” or “Blanc Fumé de Pouilly”, or from the right to the controlled designation of origin “Pouilly-sur-Loire”, until they are grubbed up.

b) – The vine parcels in place on 31 July 2010 whose spacing between rows is between 1.30 metre and 1.40 metre continue to benefit, for their harvest, from the right to the controlled designation of origin “Pouilly-Fumé” or “Blanc Fumé de Pouilly”, or from the right to the controlled designation of origin “Pouilly-sur-Loire”, until they are grubbed up.

XII. – Rules of presentation and labelling

1° – General provisions

Wines for which, under the terms of the present decree, the controlled designation of origin “Pouilly-Fumé” or “Blanc Fumé de Pouilly” or the controlled designation of origin “Pouilly-sur-Loire” is claimed and which are presented under the said appellation may not be declared after the harvest, offered to the public, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid controlled designation of origin is entered.

2° – Particular provisions

a) – All the optional indications are entered, on the labels, in characters whose dimensions, in height, width and thickness, are not greater than double those of the characters composing the name of the controlled designation of origin.

b) – The dimensions of the characters of the complementary geographical denomination “Val de Loire” are not greater, both in height and in width, than two-thirds of those of the characters composing the name of the controlled designation of origin.

c) – The labelling of the wines benefiting from the controlled designation of origin may specify the name of a smaller geographical unit, provided that: - it is a registered cadastral lieu-dit; - it appears on the harvest declaration.

CHAPTER II

I. – Declaration obligations

1. Declaration of renunciation to produce

Every operator declares to the defence and management body, at the latest on 31 July before the harvest, the parcels for which it renounces to produce the controlled designation of origin. The defence and management body transmits this information to the approved control body as soon as possible.

2. Claim declaration

The claim declaration must be sent to the defence and management body before 10 December of each year. It indicates: - the designation claimed; - the volume of the wine; - the EVV or SIRET number; - the name and address of the applicant; - the place of storage of the wine. It is accompanied by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

3. Declaration of dead and missing plants

Every operator approved for the operation of grape production must send to the defence and management body and to the approved control body a declaration of dead or missing plants before 10 December of each year.

4. Declaration of intention of first packaging or first bulk transaction of a wine of a new vintage (form entitled “Declaration of first bottling or movement”)

Every operator sends to the defence and management body a declaration of intention of bulk transaction or of packaging, for a new vintage, within a period of five weeks: - before the first exit from the cellar of a lot of bulk wine of the vintage concerned; - before the first packaging of a lot of wine of the vintage concerned. The defence and management body transmits the declaration to the approved control body within a period of forty-eight working hours.

5. Declaration relating to the dispatch outside the national territory of a non-packaged wine

Every operator wishing to carry out a dispatch outside the national territory of a non-packaged wine benefiting from the controlled designation of origin must declare it to the approved control body at least five working days before the dispatch.

6. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin must declare it to the defence and management body and to the approved control body within a maximum period of ten working days after this downgrading.

7. Reworking of parcels

Before any development or any works liable to modify the morphology, the subsoil or the arable layer of a delimited parcel intended for the production of the controlled designation of origin, going beyond classic deep-ploughing works, a declaration is sent by the operator to the defence and management body at least 2 weeks before the date scheduled for the start of the envisaged works. The defence and management body

transmits, without delay, a copy of this declaration, accompanied by its opinion where applicable, to the approved control body and to the services of the National Institute of Origin and Quality.

II. – Keeping of registers

1. Cellar plan

Every operator approved for vinification, storage and packaging operations keeps available for the defence and management body and the approved control body an up-to-date cellar plan, allowing in particular the number, designation, type and capacity of the containers to be identified.

2. Cellar registers

a) – Every operator packaging wines of the controlled designation of origin keeps up to date a packaging register (form entitled "Register of bottling, enrichment, holding and use of products") indicating for each lot: - the identification of the container(s) of provenance of the wine; - the volume of the lot (expressed, where applicable, in number of bottles); - the date of packaging; - the number of the packaged lot.

b) – Every operator carrying out one or more transactions of non-packaged wines of the controlled designation of origin keeps up to date a register of the removal(s) (form entitled "Monthly summary declaration") indicating in particular for each lot: - the identification of the container(s) of provenance of the wine; - the volume of the lot expressed in hectolitres; - the date of dispatch; - the reference of the recipient and, where applicable, the inter-trade contract number.

CHAPTER III

I. – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A1 – Belonging of the planted parcels to the delimited area	Documentary checks (up-to-date CVI record) and visits in the field.
A2 – Claimable production potential (grape varieties and proportion rules, monitoring of derogatory measures, planting density and trellising)	Documentary checks and visits in the field. For new approvals: verification of the whole of the rules linked to the production potential (grape varieties, density, trellising height, percentage of missing vines) during a visit in the field.
A3 – Processing, ageing, packaging and storage facilities	
Place of vinification	Documentary checks and visits on site
Traceability of the packaging	Documentary checks (register keeping) and visits on site
Appropriate storage place	Checks on site
B – RULES LINKED TO THE PRODUCTION CYCLE	
B1 – Management of the vineyard. — Pruning	Counting of the number of free eyes per stock and description of the pruning method
Average maximum load per parcel	Counting of bunches and estimation of the load from an indicative table drawn up for this purpose
Other cultivation practices	Checks at the parcel
B2 – Harvest, transport and ripeness of the grapes. — Monitoring of the harvest date	Verification of the derogations, documentary checks and check in the field
B3 – Processing, elaboration, packaging, storage. — Oenological practices and physical treatments (enrichment, prohibited practices…)	Documentary checks and visits on site
Prohibited equipment and upkeep of the equipment	Visits on site

Stock accounts, traceability	Documentary checks (register keeping)
B4 – Harvest declaration and claim declaration	
Missing vines	Documentary checks (register keeping) and visits in the field
Authorised yield	Documentary checks
Claim declaration	Documentary checks and visits on site (compliance with the arrangements and deadlines, consistency with the harvest declaration, production declaration, etc.). Control of the placing into circulation of the products
C – CHECKS ON THE PRODUCTS	
At removal for the non-packaged wines	Analytical and organoleptic examination
Packaged wines	Analytical and organoleptic examination
Non-packaged wines intended for a dispatch outside the national territory	Analytical and organoleptic examination
D – PRESENTATION OF THE PRODUCTS	
Labelling	Documentary checks, visits on site

II – References concerning the control structure

National Institute of Origin and Quality (INAO)
TSA 30003
93555 – MONTREUIL-SOUS-BOIS Cedex
Tel: (33) (0)1.73.30.38.00
Fax: (33) (0)1.73.30.38.04
Email: info@inao.gouv.fr

The check of compliance with the present specification is carried out on the basis of an approved control plan and by a third-party body offering guarantees of competence, impartiality and independence, having received delegation from the INAO.

The inspection plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations. The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
