Specification of the controlled designation of origin “TAVEL”

approved by decree no. 2011-1571 of 16 November 2011, amended by order of 24 April 2017 published in the JORF of 3 May 2017

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may claim the controlled designation of origin “Tavel”, initially recognised by the decree of 15 May 1936.

II. – Geographical denominations and complementary terms

No specific provision.

III. – Colour and types of product

The controlled designation of origin “Tavel” is reserved for still rosé wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification and the elaboration of the wines are carried out within the territory of the two following communes of the Gard department: Roquemaure and Tavel.

2° – Delimited parcel area

The wines come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the session of the standing committee of the competent national committee of 19 January 2017.

The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

3° – Immediate proximity area

The immediate proximity area, defined by derogation for the vinification and the elaboration of the wines, is made up of the territory of the following communes:

Gard department: Les Angles, Argilliers, Bagnols-sur-Cèze, Castillon-du-Gard, Cavillargues, Chusclan, Codolet, Collias, Connaux, Fournès, Gaujac, Laudun, Lirac, Montfaucon, Orsan, Le Pin, Pouzilhac, Pujaut, Remoulins, Rochefort-du-Gard, La Roque-sur-Cèze, Sabran, Saint-Etienne-des- Sorts, Saint-Géniès-de-Comolas, Saint-Gervais, Saint-Hilaire-d’Ozilhan, Saint-Laurent-des-Arbres, Saint-Marcel-de-Careiret, Saint-Michel-d’Euzet, Saint-Nazaire, Saint-Paul-les-Fonts, Saint-Pons-la- Calm, Saint-Victor-la-Coste, Sauveterre, Saze, Tresques, Valliguières, Vénéjan, Vers-Pont-du-Gard, Villeneuve-lès-Avignon

Vaucluse department: Bédarrides, Caderousse, Châteauneuf-du-Pape, Courthézon, Orange, Piolenc, Sorgues, Vedène, Violès. 1/12 Publié au BO-AGRI le 4 mai 2017

V. – Grape varieties

1° – Grape varieties

The wines come from the following varieties: - main varieties: bourboulenc B, cinsaut N, clairette B, clairette rose Rs, grenache blanc B, grenache gris G, grenache N, mourvèdre N, piquepoul blanc B, piquepoul gris G, piquepoul noir N, syrah N; - accessory varieties: calitor N, carignan blanc B, carignan N.

2° – Proportion rules on the holding

a) – The proportion of the whole of the grenache N, grenache blanc B and grenache gris G varieties is greater than 30 % and less than 60 % of the grape varieties; - The proportion of each of the main varieties is less than or equal to 60 % of the grape varieties; - The proportion of each of the accessory varieties is less than or equal to 10 % of the grape varieties.

b) – These obligations do not apply to grape-producing operators that do not vinify their production and exploit less than 1.5 hectare under the controlled designation of origin.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density. GENERAL PROVISIONS: The vines present a minimum planting density of 4,000 plants per hectare. The spacing between rows may not be greater than 2.25 metres. Each plant has a maximum area of 2.50 square metres. This area is obtained by multiplying the inter-row and inter-plant distances within the same row. PARTICULAR PROVISION: The vines trained in traditional goblet present a minimum planting density of 3,500 plants per hectare.

b) – Pruning rules.
The vines are short-pruned: - for training in goblet, with spurs bearing a maximum of 2 free eyes (buds); - for training in Royat cordon, with a maximum of 6 spurs per plant, each spur bearing a maximum of 2 free eyes. The establishment period of the Royat cordon, during a change of training method, is limited to 2 years. During this period, double Guyot pruning is authorised, with a maximum of 6 free eyes on each long cane and one or two spurs with a maximum of 2 free eyes.

c) – Trellising rules and foliage height.
- For vines trained in Royat cordon, the maximum height of the cordon is 0.60 metre, this height being measured from the ground to the tying wire of the framework arms. - For vines trained according to the "raised single-plane trellising" method, the height of the trellised foliage is at least equal to 0.4 times the spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, established at least 0.30 metre above the ground, and the upper topping limit, established at least 0.20 metre above the upper trellising wire. - For all the other training methods, the length of the shoots, after topping, may not be less than 0.70 metre. - The bourboulenc B, cinsaut N, clairette B, clairette rose Rs, piquepoul blanc B, piquepoul gris G, piquepoul noir N and syrah N varieties, trained in Royat cordon, are compulsorily trellised in "raised single-plane trellising" with a carrier wire and at least one additional level of wire.

d) – Average maximum load per parcel.
- The average maximum load per parcel is fixed at 8,000 kilograms per hectare; - Where irrigation is authorised, in accordance with the provisions of Article D. 645-5 of the Rural and Maritime Fishing Code, the average maximum load per parcel of the irrigated parcels is fixed at 6,000 kilograms per hectare. - During a change of training method, for the two campaigns during which the vine parcel is pruned in double Guyot, the average maximum load per parcel is fixed at 6,000 kilograms per hectare.

e) – Threshold for missing vines.
The percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 20 %.

f) – Cultivation condition of the vine.
The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of its soil.

2° – Other cultivation practices

In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir: - Plastic mulching is prohibited; - The addition of exogenous soil onto parcels of the delimited parcel area is prohibited; "exogenous soil" means a soil that does not come from the delimited parcel area; - Any substantial modification of the morphology of the relief and of the natural pedological sequence of a parcel or cadastred zone intended for the production of the controlled designation of origin (levelling, filling, cutting, etc.) is prohibited; - A plant cover of the headlands is compulsory beyond 2 metres from the first plant or trellising element; the control of this plant cover is carried out either by mechanical means or by equipment allowing a precise localisation of the treatment products; - On at least 60 % of the area comprised between two rows, either a soil tillage is carried out or a sown or spontaneous plant cover is present. In the latter case, the control of the spontaneous vegetation is

carried out either by mechanical means or by equipment allowing a precise localisation of the treatment products.

3° – Irrigation

Irrigation may be authorised in accordance with the provisions of Article D. 645-5 of the Rural and Maritime Fishing Code.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

a) – The wines come from grapes harvested at proper ripeness.

b) – Particular provisions for transport of the harvest. - The content of the harvest-transport bins is limited to 5,000 kilograms. - Where the content is between 3,000 kilograms and 5,000 kilograms, the harvest is compulsorily protected by a rigid and watertight cover, and a gas inerting against oxygen is compulsory; - The transport of the harvest from the parcel to the vinification cellar is compulsory each half-day; - Where the harvest is transported from the parcel to a vinification cellar installed in a commune situated outside the canton of harvest, the harvest is compulsorily protected by a rigid and watertight cover, and a gas inerting against oxygen is compulsory; - The harvest-transport bins are of stainless steel or covered with a food-grade paint.

2° – Ripeness of the grapes

a) – Sugar richness of the grapes. Grapes presenting a sugar content lower than the following may not be considered as being at proper ripeness: - 189 grams per litre of must for the mourvèdre N and syrah N varieties; - 198 grams per litre for the other black varieties; - 187 grams per litre of must for the white varieties.

b) – Minimum natural alcoholic strength by volume. The wines present a minimum natural alcoholic strength by volume of 11.5 %.

VIII. – Yields. – Entry into production

1° – Yield

The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 46 hectolitres per hectare.

2° – Limit yield

The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 50 hectolitres per hectare.

3° – Loss of the benefit of the controlled designation of origin

The wines are obtained within the limit of a yield of 52 hectolitres per hectare. This yield corresponds to the total production of the claimed parcels. Any exceeding of this yield causes the whole of the harvest to lose the benefit of the controlled designation of origin.

4° – Entry into production of young vines

The benefit of the controlled designation of origin may be granted to wines coming from:

- parcels of young vines only from the 3rd year following that in the course of which planting was carried out in place before 31 July;

- parcels of young vines only from the 2nd year following that in the course of which grafting in place was carried out before 31 July;

- parcels of vines that have been top-grafted, at the earliest in the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the

course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages.

a) – Blending of the varieties. The wines come from a blend in which the grenache N variety is compulsorily present.

b) – Analytical standards. The wines ready to be marketed in bulk or packaged present: - a content of fermentable sugars (glucose and fructose) less than or equal to 4 grams per litre; - a volatile acidity less than or equal to 17.34 milliequivalents per litre; - a total sulphur dioxide content less than or equal to 150 milligrams per litre; - a modified colour intensity (OD 420 nm + OD 520 nm + OD 620 nm) between 0.50 and 3.

c) – Oenological practices and physical treatments. - The use of pieces of wood is prohibited; - The use of charcoals for oenological use, alone or in a mixture in preparations, is prohibited; - The wines do not exceed, after enrichment, a total alcoholic strength by volume of 13.5 %.

d) – Equipment for the elaboration of the wines. Continuous presses are prohibited.

e) – Vat capacity. Every operator has an overall vat capacity greater than or equal to the product of the yield referred to at 1° of point VIII by the area in production vinified at the cellar.

f) – Overall upkeep of the cellar and equipment. The cellar (floors and walls) and the vinification equipment present a good general condition of upkeep.

g) – Control of the fermentation temperatures. The cellar is equipped with a system for controlling the temperatures of the fermentation vats.

2° – Provisions relating to packaging

For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging. The analysis reports are kept for a period of at least 6 months from the date of packaging.

3° – Provisions relating to storage

The operator demonstrates an identified place (cellar or warehouse) for the storage of the packaged wines.

4° – Provisions relating to the movement of products and to placing on the market for the consumer

The wines are placed on the market for the consumer according to the provisions of Article D. 645-17 of the Rural and Maritime Fishing Code.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

The geographical area of the controlled designation of origin “Tavel”, “Cru des Côtes du Rhône”, is situated in the Rhône corridor 15 kilometres to the north/west of the commune of Avignon. It is located essentially on the commune of Tavel and on a reduced part of the commune of Roquemaure, both in the Gard department, at the heart of the Gard “Côte du Rhône”. The vineyard is periodically swept by the Mistral, a north wind, cold and dry, sometimes very violent. The summers are hot and dry. The sunshine is important. The average annual rainfall is 700 millimetres, very low in the ripeness period of the grapes.

The geographical area brings together four great types of soils that have in common that they are free-draining. The clayey-limestone combe, situated to the west of the village, is oriented west/east. It presents the majestic shape of a vast ancient theatre whose tiers are colonised by the vineyard. It is delimited,

respectively to the north and to the south, by the two anticlines of an Urgonian limestone massif whose syncline it occupies, which was worked by a pre-Oligocene erosion. In the Pliocene, the syncline was filled by accumulations of marls and clays. Thus, the combe is characterised by the presence of more or less deep layers of "terra rossa" put under cultivation, and of outcrops of limestone bedrock that are difficult to exploit. The presence of white-coloured "lauzes" (flat stones) on the surface protects the soils from the effects of the sun, insofar as they have reflective properties.

The high pebbly terrace of the Vallongue plateau is situated to the north-east of the village at an altitude of about 120 metres. It forms a long horizontal plateau covered with a great quantity of coarse pebbles. To the south, it is interrupted by narrow valleys. The vineyard is planted in a north/south direction. The pedogenesis of the terrace began about a million years ago. It is characterised by a leaching and a clayey accumulation that give a red fersiallitic soil, while the decarbonation of the upper layers favoured the phenomena of cementation in the lower horizons, the puddingstones. The red horizon scarcely exceeds one metre, giving way to calcareous sands with a very high proportion of gravels which imperceptibly connect, one or two metres lower, to the initial geological formation of the terrace that was not affected by the pedogenesis. The latter, of little thickness, is hardly distinguished from the underlying Pliocene layer.

The sandy slopes and valleys are, for the most part, situated below the high terrace. They are probably the oldest exploited soils. Poor, but easy to exploit, they are indeed reserved for viticulture, well before the boom of the 18th century. They are covered with Pliocene sands and the spreading of pebbles there is rather weak. The "white lands" arising from recent colluvium are located to the south-east of the village, at the lowest altitudes, declining from 86 metres to about 63 metres. Their cultivation qualities are not neglected, for they are naturally well drained.

b) – Description of the natural factors contributing to the link

The oldest trace of civilisation known at "Tavel" is attested by the discovery, in 1973, of a "Gallo-Roman thermal complex". Moreover, Jean REBOUL does not fail to underline the originality of the geographical situation of the "Villa de Tavellis", dated to the Gallo-Roman period and situated in the vicinity of the ancient traffic routes. He also mentions the numerous debris of earthenware vessels "decorated with bunches of grapes", discovered in 1960, at the place called the "Roquautes", in tombs of the 1st century of our era. The oldest document mentioning "the vines of Tavel" dates from 897. Its object is an exchange of goods between the bishop and the viscount of Béziers.

Another important fact is the act of "pariage", of 1292, which places the village community of Tavel under the authority of the Lord Abbot of the Benedictine monastery of Villeneuve-lès-Avignon. Moreover, the installation of the pontifical court at Avignon in the 14th century has the effect of favouring the production and the trade of the wine of "Tavel". From the end of the 17th and the beginning of the 18th century, the "compoix" of Tavel of the year 1636, as well as the register of deliberations of the village community, or again the poll-tax rolls, attest to the specialisation of "Tavel" in a quality wine economy of high added value. For example, a consular deliberation, of 8 April 1716, mentions the "reputation of quality of the wine of the cru" to the point of adopting measures aimed at combating proven frauds. A deliberation, of 14 January 1731, notes the extension of the vineyard and the prosperity of the village. Another deliberation of 1734 recalls the ordinance of the Intendant regulating the new plantings, on pain of fine, motivated by the will to protect the food crops progressively replaced by the vine. Finally, an extract of the register of deliberations of the commune of Tavel, dated 23 August 1754, attests to the existence of a "ban des vendanges" (harvest ban) whose object is to guarantee the "quality of the wines" by the fact "of not picking the grapes and doing the harvest except at true ripeness".

During the prosperous 19th century, the notoriety of the wines of "Tavel" never ceases to grow. The growth is, however, broken by the destruction due to phylloxera. Indeed, the economy is so specialised, in a vineyard of high added value, that the consequences of the crisis are tragic. Thus, at the end of the 19th century, the vineyard is reduced to a shadow of its former self and the population diminished by about 75 %. However, from the beginning of the 20th century, the milestones of a new prosperity are laid. The Tavel producers, aware of the ancient prestige of their "cru", engage early in the recognition of the controlled designation of origin. The "Union of the owner-winegrowers of Tavel", constituted in 1902, is one of the first French associations for the defence of wines, and "Tavel" is one of the first recognised controlled designations of origin (decree of 15 May 1936). The collective dimension is reinforced by the presence of

a cooperative cellar which is inaugurated on 31 July 1938, in the presence of the President of the Republic, Mr Albert LEBRUN, and of the President of the Council, Mr Édouard DALADIER.

The reputation and the notoriety of the wine of Tavel are ancient. They go back, at the very least, to the 17th and 18th centuries. Moreover, publishing and literature are rich in references. A remarkable reference is the 1854 LEVASSEUR edition of the "Atlas national illustré des 86 Départements et des Possessions de la France", in which the wine of "Tavel" is mentioned as "one of the famous productions of the Gard department". Moreover, the great names of wine literature such as Paul de CASSAGNAC, in "Vins de France" (1927), or again Maurice CONSTANTIN-WEYER, in "L'âme du vin" (1932), did not fail to note the originality of the wine of "Tavel". For example, Maurice CONSTANTIN-WEYER devotes chapter V of book II of "L'âme du vin" to the wine of "Tavel". In addition, Paul RAMAIN recalls that famous authors such as Frédéric MISTRAL, Alphonse DAUDET, Honoré de BALZAC or again MONSELET and RONSARD, praised the wine of Tavel. From a statistical point of view, in 2009, the vineyard covers an area of approximately 950 hectares. The average annual production is about 39,000 hectolitres of wine.

2° – Information on the quality and characteristics of the product

Reflecting the usages, the benefit of the controlled designation of origin "Tavel" is reserved for still rosé wines only. The characteristic of a structured rosé wine very probably arises from the configuration of the oldest natural formations. Thus, the value of the colour intensity is framed. Indeed, it derives from a type of "dark rosé wine of a beautiful haematuric colour" as Paul RAMAIN characterises it in "Les grands vins de France" (1931). The young wines develop primary aromas often dominated by amylic notes, or of red fruits, very frank. The finishes may be marked by minerality. With time, perceptions of liquorice and aromatic herbs, as well as gunflint and spices, enrich the gustatory profile of the wines. In all cases, the palate keeps a very round attack and evolution, an intense, very long aromatic persistence which, in the end, subtly solicits the taste buds.

3° – Causal interactions

The specification authorises only the vinification into rosé wine, not as a response to the recent evolution of the markets or of the consumption usages but indeed as an original identity. Professor Jacques MABY explains this particularity in the following way: "the vineyard of Tavel is the only one, to our knowledge, to have entirely specialised in rosé, to the point of forbidding itself any other production… hence the necessity of a great technical mastery and of original solutions making it possible to vinify the whole of the production into rosé". The vatting period of the wines of "Tavel", which is longer than that of a white wine, and shorter than that of a red wine, is probably the consequence of the ripenesses offered by the natural environment. Indeed, the water and thermal constraints, to which the grapes are subjected, are very particular. The ripeness of the polyphenols is delicate to obtain, for the concentration in sugar can be exponential. For example, a withering of the berries may occur before the phenolic ripeness is satisfactory to vinify red wines, which imposes a vinification into rosé wine. Added to this is the fact that the geographical area benefits from climatic conditions very favourable to the sanitary condition of the harvests, one of the main effects of which is to limit the plant-protection treatments. In his book "Le mangeur du XIXe siècle", Jean-Paul ARON cites the wine of "Tavel" among the wines of the wine list of the prestigious Parisian gastronomic establishment "Les trois frères provençaux", whose notoriety was immense during the first half of the 19th century.

XI. – Transitional measures

1° – Grape varieties. – Proportion rules on the holding

a) – On a transitional basis, the holdings whose grape varieties do not meet the proportion rules defined in the present specification continue to benefit, for their production, from the right to the controlled designation of origin, until the 2019 harvest inclusive and subject to compliance with the following schedule for bringing into conformity: - for the 2014 harvest, the non-conforming vineyard of the holding may not represent more than 50 % of the area of the vines producing the controlled designation of origin concerned; - for the 2017 harvest, the non-conforming vineyard of the holding may not represent more than 20 % of the area of the vines producing the controlled designation of origin concerned.

b) – In the event of an involuntary change of structure of the holding (succession, termination of lease, liquidation of companies, expropriations), the operator has a period of five years from the date of the

change of structure so that the grape varieties of the holding meet the proportion rules defined in the present specification.

2° – Training methods

a) – Planting density. - The provisions relating to the maximum spacing between rows and to the maximum area per plant do not apply to the plantings carried out before 31 July 2009; - The vine parcels in place on 31 July 2009 and not meeting the provisions relating to planting density continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up, subject to compliance with the provisions relating to the trellised foliage height and to the length of the shoots fixed in the present specification.

b) – Trellising rules. The provision relating to the trellising obligation of the bourboulenc B, cinsaut N, clairette B, clairette rose Rs, piquepoul blanc B, piquepoul gris G, piquepoul noir N and syrah N varieties, when they are trained in Royat cordon, does not apply to the plantings carried out before 31 July 2009.

3° – Other cultivation practices

The vine parcels presenting a plastic mulch continue to benefit, for their harvest, from the controlled designation of origin, until the 2013 harvest inclusive.

4° – Oenological practices and physical treatments

The provision relating to the obligation of a system for controlling the temperatures of the fermentation vats applies from the 2014 harvest.

XII. – Rules of presentation and labelling

1° – General provisions

Wines for which, under the terms of the present specification, the controlled designation of origin “Tavel” is claimed and which are presented under the said appellation may not be declared, after the harvest, offered to the public, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid controlled designation of origin is entered.

2° – Particular provisions

The labelling of the wines benefiting from the controlled designation of origin may specify the larger geographical unit “Cru des Côtes du Rhône” or “Vignobles de la Vallée du Rhône”. The conditions of use of the larger geographical unit “Vignobles de la Vallée du Rhône” are specified by the agreement signed between the various defence and management bodies concerned.

CHAPTER II

I. – Declaration obligations

1. Claim declaration

The claim declaration is sent to the defence and management body at least fifteen days before the first bulk transaction or bulk sale to the consumer, or before the first packaging, and at the latest on 31 December of the year of harvest. It indicates: - the designation claimed; - the volume of the wine; - the EVV or SIRET number; - the name and address of the applicant; - the place of storage of the wine. It is accompanied by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

2. Declaration of renunciation to produce

Every operator declares to the defence and management body, before 1 May preceding the harvest, the parcels for which it renounces to produce the controlled designation of origin. The defence and management body transmits this declaration to the approved control body as soon as possible. This declaration specifies: - the identity of the operator; - the EVV or SIRET number; - for each parcel: the cadastral reference, the area, the year of planting, the variety, and whether they are intended for the production of a more general controlled designation of origin.

3. Declaration of bulk transaction and declaration relating to the dispatch outside the national territory of a non-packaged wine

A declaration of bulk transaction is sent to the approved control body at the latest ten working days before the date of exit from the cellars. This declaration specifies, where applicable, whether the non-packaged wine is intended to be dispatched outside the national territory.

4. Prior declaration of packaging or of bulk sale to the consumer

A declaration prior to packaging, or a declaration of bulk sale to the consumer, for the blended wines, is sent to the approved control body at the latest ten working days before the scheduled date of bulk sale to the consumer or of packaging. Operators carrying out more than ten packaging operations per year are exempted from this declaration obligation, but make a request for an unannounced sampling to the approved control body and send, quarterly, a summary declaration.

5. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin makes the declaration thereof to the defence and management body and to the approved control body within a maximum period of fifteen days after this downgrading.

6. Declaration of involuntary change of structure

Every operator sends to the defence and management body a declaration of involuntary change of structure as soon as it occurs and is recorded in the CVI.

7. Declaration of change of training method

Every operator sends to the defence and management body a declaration of change of training method as soon as it is carried out on the parcel.

8. Reworking of parcels

Before any addition of soil, any development or any works liable to modify the soil profile or the morphology of the relief, and with the exception of classic deep-ploughing works, a declaration is sent by the operator to the defence and management body at least two months before the date scheduled for these works. The defence and management body transmits, without delay, a copy of this declaration to the services of the National Institute of Origin and Quality.

9. Transport of the harvest

A declaration of transport of the harvest is made to the defence and management body at least ten days before the start date of the harvest by the harvest declarant who has the responsibility of the transport: - where the transport of the harvest is carried out with a bin whose capacity is between 3,000 kilograms and 5,000 kilograms; - where the harvest is transported from the parcel to a vinification cellar installed in a commune situated outside the canton of harvest. The transport declaration specifies the type of container, the total capacity (excluding compartments), the type of cover and the means of inerting against oxygen.

II. – Keeping of registers

No specific provision.

CHAPTER III

I. – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A1 – Belonging of the planted parcels to the delimited area	Documentary check (up-to-date CVI record) and check in the field
A2 – Claimable production potential (grape varieties and proportion rules, monitoring of	Documentary check and check in the field

transitional measures, planting density and trellising)	
B – RULES LINKED TO THE PRODUCTION CYCLE	
B1 – Management of the vineyard. — Average maximum load per parcel	Counting of bunches and estimation of the load from an indicative table drawn up for this purpose
Cultivation condition of the vine and other cultivation practices	Check at the parcel
Irrigation	Documentary check (declaration obligations) and check of the average maximum load per parcel
B2 – Harvest, transport and ripeness of the grapes. — Particular provisions for transport of the harvest	Documentary check and check in the field
B3 – Processing, elaboration, ageing, packaging, storage. — Oenological practices or treatments (enrichment, prohibited practices…)	Documentary check and on-site check
B4 – Harvest declaration and claim declaration	
Missing vines	Documentary check (up-to-date keeping of the list) and check in the field
Authorised yield	Documentary check (check of declarations)
VSI, volumes harvested in excess of the authorised yield	Documentary check (monitoring of destruction certificates)
Claim declaration	Documentary check and on-site check (compliance with the arrangements and deadlines, consistency with the harvest declaration, production declaration, etc.). Control of the placing into circulation of the products
C – CHECKS ON THE PRODUCTS	
At the stage of the placing into circulation of the non-packaged products or at the packaging stage	Analytical examination
At the stage of the placing into circulation of the non-packaged products and/or at the packaging stage	Organoleptic examination
Non-packaged wines intended for a dispatch outside the national territory	Analytical and organoleptic examination of all the lots

II. – References concerning the control structure

National Institute of Origin and Quality (INAO)
TSA 30003

Tel: (33) (0)1.73.30.38.00
Fax: (33) (0)1.73.30.38.04
Email: info@inao.gouv.fr

The check of compliance with the present specification is carried out by a third-party body offering guarantees of competence, impartiality and independence, under the authority of the INAO, on the basis of an approved inspection plan.

The inspection plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations.

The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
