Published in the agricultural Official Bulletin on 26 June 2014

SPECIFICATION OF THE CONTROLLED DESIGNATION OF ORIGIN "CONDRIEU"

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may claim the controlled designation of origin "Condrieu", initially recognised by the amended decree of 27 April 1940.

II. – Geographical denominations and complementary terms

No specific provision.

III. – Colour and types of product

The controlled designation of origin "Condrieu" is reserved for still white wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification and the elaboration of the wines are carried out within the territory of the following communes:

- Ardèche department: Limony;

- Loire department: Chavanay, Malleval, Saint-Michel-sur-Rhône, Saint-Pierre-de-Bœuf, Vérin;

- Rhône department: Condrieu.

2° – Delimited parcel area

The grapes come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the session of the competent national committee of 2 June 1989.

The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

3° – Immediate proximity area

The immediate proximity area, defined by derogation for the vinification and the elaboration of the wines, is made up of the territory of the following communes:

Ardèche department: Alboussière, Andance, Ardoix, Arlebosc, Arras-sur-Rhône, Boffres, Bogy, Champagne, Champis, Charmes-sur-Rhône, Charnas, Châteaubourg, Cheminas, Colombier-le- Cardinal, Cornas, Eclassan, Etables, Félines, Gilhac-et-Bruzac, Glun, Guilherand-Granges, Lemps, Mauves, Ozon, Peaugres, Peyraud, Plats, Quintenas, Saint-Barthélemy-le-Plain, Saint-Cyr, Saint- Georges-les-Bains, Saint-Romain-d'Ay, Saint-Romain-de-Lerps, Sarras, Sécheras, Serrières, Saint- Désirat, Saint-Etienne-de-Valoux, Saint-Jean-de-Muzols, Saint-Péray, Soyons, Talencieux, Thorrenc, Toulaud, Tournon-sur-Rhône, Vernosc-lès-Annonay, Vinzieux, Vion

Drôme department: Albon, Andancette, Beaumont-Monteux, Beausemblant, Bourg-lès- 1 Valence, Chanos-Curson, Chantemerle-les-Blés, Châteauneuf-sur-Isère, Chavannes, Clérieux, Crozes- Hermitage, Erôme, Gervans, Granges-les-Beaumont, Larnage, Laveyron, Mercurol, La Motte-de- Galaure, Ponsas, Pont-de-l'Isère, La Roche-de-Glun, Saint-Barthélemy-de-Vals, Saint-Donat-sur- l'Herbasse, Saint-Rambert-d'Albon, Saint-Uze, Saint-Vallier, Serves-sur-Rhône, Tain-l'Hermitage, Triors, Valence, Veaunes

Isère department: Chonas-l'Amballan, Le Péage-de-Roussillon, Reventin-Vaugris, Les Roches-de-Condrieu, Sablons, Saint-Alban-du-Rhône, Saint-Clair-du-Rhône, Saint-Maurice-l'Exil, Salaise-sur-Sanne, Seyssuel, Vienne

Loire department: Bessey, La Chapelle-Villars, Chuyer, Lupe, Maclas, Pélussin, Roisey, Saint-Romain-en-Jarez

Rhône department: Ampuis, Les Haies, Loire-sur-Rhône, Longes, Sainte-Colombe, Saint-Cyr- sur-le-Rhône, Saint-Romain-en-Gal, Tupin-et-Semons

V. – Grape varieties

The wines come from the viognier B variety.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density.

- The vines present a minimum planting density of 6,500 plants per hectare. Each plant has a maximum area of 1.5 square metre. This area is obtained by multiplying the inter-row and inter-plant distances. - The vines present a spacing between rows less than or equal to 2 metres. - Alleys of a width greater than 2 metres may be established. They have a width less than or equal to 3 metres, except in rugged situations (slope of at least 30 %), where they may be wider. These alleys have a controlled plant cover, spontaneous or sown.

b) – Pruning rules.

The vines are pruned with a maximum of 10 free eyes (buds) per plant, according to the following techniques: - short spur pruning (goblet, Royat cordon with one or two arms), with a maximum of 3 free eyes per spur; - single Guyot pruning, with a maximum of 8 free eyes on the long cane.

c) – Trellising, foliage-height and staking-height rules.

The vines are trained either on stakes or in “raised single-plane trellising”: - For vines trained in “raised single-plane trellising”, the height of the trellised foliage is at least equal to 0.6 times the average spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, established at least 0.30 metre above the ground, and the upper topping limit; - For vines trained on stakes, the staking height is at least 1.50 metre. This height is equal to the height measured between the ground level and the top of the stake.

d) – Average maximum load per parcel.

The average maximum load per parcel is fixed at 8,000 kilograms per hectare.

e) – Thresholds for missing vines.

The percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 20 %.

f) – Cultivation condition of the vine.

The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of its soil.

2° – Other cultivation practices

In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir:

a) – On the parcels apt for the production of the controlled designation of origin, the works for controlling water flow and the elements ensuring the integrity and durability of the soils (low walls, terraces, banks, etc.) are maintained according to usage.

b) – Only developments or works that do not bring a substantial modification of the structuring elements (low walls, terraces, embankments, banks, etc.) of a parcel of the delimited parcel area are authorised.

c) – The control of the spontaneous vegetation is carried out, from 1 September to 1 February, either by soil tillage or by equipment ensuring a precise localisation of the treatment products.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

a) – The wines come from grapes harvested at proper ripeness.

b) – Particular harvesting provisions. - The wines come from manually harvested grapes. - The wines presenting a content of fermentable sugars (glucose and fructose) greater than or equal to 45 grams per litre come from over-ripe grapes, harvested by successive pickings.

c) – Particular provisions for transport of the harvest. The bunches of grapes are transported whole to the place of vinification.

2° – Ripeness of the grapes

a) – Sugar richness of the grapes. Grapes presenting a sugar content lower than 178 grams per litre of must may not be considered as being at proper ripeness. For the elaboration of the wines presenting a content of fermentable sugars (glucose and fructose) greater than or equal to 45 grams per litre, grapes presenting a sugar content lower than 220 grams per litre of must may not be considered as being at proper ripeness.

b) – Minimum natural alcoholic strength by volume. The wines present a minimum natural alcoholic strength by volume of 11.5 %.

VIII. – Yields. – Entry into production

1° – Yield

The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 41 hectolitres per hectare.

2° – Limit yield

The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 46 hectolitres per hectare.

3° – Entry into production of young vines

The benefit of the controlled designation of origin may be granted to wines coming from:

- parcels of young vines only from the 2nd year following that in the course of which planting was carried out in place before 31 July;

- parcels of young vines only from the 1st year following that in the course of which grafting in place was carried out before 31 July;

- parcels of vines that have been top-grafted, at the earliest in the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages.

a) – Analytical standards. The wines presenting a content of fermentable sugars (glucose and fructose) greater than or equal to 45 grams per litre present, by way of derogation, a volatile acidity content fixed by joint order of the minister responsible for consumption and the minister responsible for agriculture.

b) – Oenological practices and physical treatments. - Any enrichment or acidification operation is prohibited for the elaboration of the wines presenting a content of fermentable sugars (glucose and fructose) greater than or equal to 45 grams per litre. - The use of pieces of wood is prohibited; - The wines do not exceed, after enrichment, a total alcoholic strength by volume of 14 %. - The wines presenting a content of fermentable sugars (glucose and fructose) greater than or equal to 45 grams per litre have a total alcoholic strength by volume greater than or equal to 13 %.

c) – Prohibited equipment. Continuous presses are prohibited.

d) – Vat capacity. Every operator has an overall vat capacity at least equal to the product of the yield referred to at 1° of point VIII by the area of the vines intended to be vinified in the cellar.

e) – Overall upkeep of the cellar and equipment. The cellar (floor and walls) and the vinification equipment present a good general condition of upkeep.

2° – Provisions relating to packaging

For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging. The analysis reports are kept for a period of 6 months from the date of packaging.

3° – Provisions relating to storage

The operator demonstrates an identified place for the storage of the packaged products.

4° – Provisions relating to the movement of products and to placing on the market for the consumers

The wines are placed on the market for the consumer according to the provisions of Article D. 645-17 of the Rural and Maritime Fishing Code.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

Situated about forty kilometres to the south of Lyon, on the eastern edge of the Massif Central, the vineyard of the controlled designation of origin “Condrieu” is inserted between those of the controlled designations of origin “Côte Rôtie”, to the north, and “Saint-Joseph”, to the south. The geographical area is thus delimited over seven communes spread over the departments of the Rhône, the Loire and the Ardèche. In the organisation of the controlled designations of origin of the Rhône Valley, the controlled designation of origin “Condrieu” is part of the “Crus des Côtes du Rhône”.

The landscape is dominated by the steep hillsides abruptly overhanging the right bank of the Rhône. The weathering of Primary magmatic and metamorphic rocks, where granites dominate, is at the origin of most of the soils — sandy-clayey, poor and friable — that characterise this territory. Nevertheless, a few aeolian deposits arising from the glacial era (loess) exist in the form of very localised “lenses”. In the majority of cases, the steep slope, the fragility and the instability of the soils require important development works. The plants trained on stakes are thus established on narrow terraces, locally called “chaillées”, where the soil is retained by low walls or “cheys”.

The north wind, locally called “Bise”, is the most frequent. Cold and dry, it makes it possible to dry the foliage and to limit the development of cryptogamic diseases. This windy context implies the choice of relatively sheltered and sunny situations, offered by the general south and south-east orientation of the slopes on which the vineyard is established.

b) – Description of the human factors contributing to the link

The vines of “Condrieu” are said to have been planted by the emperor PROBUS from plants brought back from Dalmatia, in the 3rd century AD. While this version of the origin of the vineyard remains hypothetical, the proofs of the anteriority of the establishment and of the wine culture that results from it abound, notably on the archaeological site of Saint-Romain-en-Gal, situated about a dozen kilometres away, and renowned for its numerous mosaics unearthed among the vestiges of Roman villas. Among these pictorial works, one represents a scene of grape harvest and treading as well as the pitching of a jar (mosaic of the agricultural calendar — beginning of the 3rd century, museum of Saint-Germain-en-Laye — Provenance: Saint-Romain-en-Gal). Indeed, at the time the wine is resined and thereby qualified as “picatum” (pitched) and known under the name of Allobrogica. (A. FERDIÈRE — Les campagnes en gaule romaine — page 87 — volume 2).

The initial development of the vineyard is therefore probably linked to the Roman peace which allows the Allobroges, whose territory encompasses part of the right bank of the Rhône opposite Vienne, to acquire

Roman citizenship and, by the same token, the right to plant the vine. The Allobrogica is very much in vogue at the beginning of the century of the Antonines (2nd century AD).

By contrast, in the Middle Ages, these wines of the Rhône Valley have difficulties in reaching the north of France because of exorbitant duties demanded by the towns crossed, riparian to the Rhône, notably Lyon and Mâcon. (R. DION — Histoire de la vigne et du vin en France). To circumvent this obstacle, the 17th century sees the development of the trade in the wines of the Rhône Valley which reach Paris by going up this time the course of the Loire. Indeed, at the level of Condrieu, the Rhône Valley is separated from that of the Loire only by a distance of about forty kilometres, crossable by a low part of the Pilat massif. Further north, the canals of Briare and Loing make it possible to link the Loire to the Seine to enter Paris.

However, from the 19th century, the difficulties follow one another. The phylloxera begins by destroying a large part of the vineyard, as the writings of an Alsatian passing through the Rhône Valley in 1893 underline: “The vineyards so renowned formerly are almost destroyed; scarcely do a few vine-stocks remain on the hillsides of the Côte-Rôtie, of Ampuis and of Condrieu” (Jean FELBERT, histoire d’une famille alsacienne — A. PICARD et RAAN). Then the First World War, and finally the industrialisation of the Rhône Valley drastically reduce the labour available to work the hillsides. In the course of the 20th century, the vineyard thus nearly disappears. The changes in the mode of consumption, and the enthusiasm for quality wines and haute cuisine, made possible the revival of this vineyard. Progressively, the vine regains its place and occupies the surfaces that existed before the phylloxera crisis.

The grape varieties rest exclusively on the viognier B variety, or “vionnier”, the emblematic variety of “Condrieu”. It is mentioned, as early as 1781, in the natural history of the province of the Dauphiné, which specifies concerning the wines of Vienne (“Côte Rôtie” and “Condrieu”) “two sole species of grapes compose these excellent wines, the Serine and the Vionnier”. Its history is intimately linked to that of the vineyard of “Condrieu” for it nearly became extinct with it in the 1970s. In 1965, indeed, only some 8 hectares remain, in the region and in the world, from which the repopulation is carried out to progressively resuscitate the vineyard which comprises, in 2010, more than 140 hectares. Like the syrah N variety, the viognier B variety, a variety of the second period (rather late ripeness), is placed here at the limit of its cultivation possibilities, thus offering the maximum of its potential. This variety is a little capricious through its irregular production. It is, on the other hand, original through its capacity to reach naturally high sugar richnesses.

The vineyard owes its name to the eponymous commune, Condrieu (corner of the stream). This little fluvial town, at the crossroads of three departments — the Rhône, the Loire and the Isère — founded by the Romans in 59 BC, is named thus because of its situation at an angle of land formed by a river, at the place where it flows into another, called Coin. The vineyard obtains a first sign of recognition as controlled designation of origin “Côtes du Rhône” on 19 November 1937. On 27 April 1940, the controlled designation of origin “Condrieu” is recognised, exclusively for the still white wines, on the communes of Condrieu (Rhône), Vérin and Saint-Michel-sur-Rhône (Loire). In 1967, the geographical area is extended to four communes further south: Chavanay, Malleval, Saint-Pierre-de-Bœuf (Loire) and Limony (Ardèche). In 2009, the area in production is about 150 hectares for an average annual production of 5,000 hectolitres elaborated by eighty estates and merchants.

2° – Information on the quality and characteristics of the product

The controlled designation of origin “Condrieu” is recognised only for still white wines. In the middle of the 19th century, the wine is “sweet” and can be drunk six months after the vinification (V. Rendu, Ampélographie française — 1854). In 2010, it is, in most cases, “dry”, sometimes “medium-dry”. When the natural conditions permit, a confidential production of “mellow” or “sweet” wines is elaborated from over-ripe grapes. It is characterised by a golden robe with intense golden glints. Its nose develops very marked aromas of ripe fruit, such as peach and above all apricot, sometimes of violet and white flower. On the palate, it is powerful, of remarkable balance, fat and mellow, without being heavy because supported by a good liveliness that gives it a long, intense aromatic persistence.

3° – Causal interactions

Situated on the right bank of the Rhône, the geographical area benefits from a favourable mesoclimate (known as “lyonnais”), linked to the particular topography of the very abrupt hillsides overhanging the river, and from a geo-pedological complex which requires the permanent intervention of man for the

harmonious development and the maintenance of the terraces and low walls. This situation offers the viognier B variety, "king" of the controlled designation of origin "Condrieu" and planted at the northern limit of its cultivation, optimal conditions of development and ripeness. The fissured subsoil allows this variety, particularly adapted to acidic soils, to draw the water and the mineral elements necessary for obtaining harvests remarkable for their balance and their sugar richness despite their situation in a northern zone.

This particular subsoil gives the dry and medium-dry wines a characteristic liveliness that supports the whole of the wide aromatic palette. This liveliness due to the subsoil is also found in the wines from over-ripe grapes, where the powerful aromas of ripe fruit express themselves without being heavy. Delimited in respect of the usages and of the requirements of the viognier B variety in order to perpetuate its potential despite the difficulties of exploitation, the parcel area carefully classes the slopes: only the best-exposed and those meeting the requirements of heat and protection against the cold northern winds are retained. This delimitation allows an optimal management of the plant and a control of its production potential which are reflected in practices of low yields, arising from a training method on stakes, and by a management of the planting densities adapted to the terraces.

These natural factors, associated with the historical know-how, thus make it possible to produce a fine white wine, dry or presenting fermentable sugars. The transmission of the usages of vine cultivation and of safeguarding of fragile soils since Antiquity, by the development of terraces and high low-walls, has enabled the vineyard of Condrieu to preserve a particular physiognomy and a remarkable landscape that contributes to its renown. By preserving the tradition of manual harvest of the grapes, the winegrowers of Condrieu contribute to preserving the originality and the characteristics of this hillside vineyard.

The antiquity of this pre-Roman vineyard is only equalled by the renown of its wine, attested under the name of "Condrieu" at least since the 17th century, consumed in Lyon and Paris and praised by famous authors. This prestige of the wines of Condrieu is continuous since the origins of the vineyard. A sampling of a few writings over the last five centuries gives the measure of this aura. As early as the 17th century, at the entrances to Paris, the wines known as "de Condrieu" are among those taxed at the highest rate, applied to the most renowned wines (Ordinance of 1680 — National Archives). According to R. Gadille, in the 18th century, the chapter of Lyon and the consulate are accustomed to offering the wines of Condrieu as honorary gifts to their distinguished guests. At the same period, an edition of 1781 of the Histoire naturelle de la province du Dauphiné (Faujas de Saint-Fonds, volume I, p. 182) indicates that "… preference is still given to the white wine of Condrieu and to that of Château-Grillet". In 1801, the Traité théorique et pratique sur la culture de la vigne (Chaptal, Rozier, Parmentier and Dussieux, volume I, p. 240) attests to an established renown for "Condrieu" and two other neighbouring wines: "the famous wines of the Hermitage, of Côte-Rôtie and of Condrieu are produced on the hillsides that border the Rhône". Later, the Roret encyclopaedia (1921) evokes it in laudatory terms: "The good white Lyonnais wines are prepared on the territory of Condrieu. They are full-bodied, spirituous and have sap, an agreeable taste and one of the most suave bouquets…".

Other references stud the history of literature. In 1710, one of the last letters of Boileau mentions: "tomorrow I am going to send for your wine of Condrieu, perhaps it will gladden my heart". Later in the century, Piron cites it poetically in his Air: De l'ouverture de Bellérophon. Finally, the correspondences of Lamartine, published by his wife, evoke "the wine of Condrieu [which] will have warmed our brains". The Condrieu wine market, the counterpart of the one organised at Ampuis for the neighbouring controlled designation of origin "Côte Rôtie", long participated in the diffusion of the renown of these white wines. This market disappeared in the 1950s and the wines of "Condrieu" progressively joined those of "Côte Rôtie" on the Ampuis wine market. The Chavanay wine market, which has existed since the 1920s, also makes an important place for the wines of "Condrieu". "Condrieu" never ceased to develop a notoriety built on its finesse, its quality, carried by a spectacular vineyard, and recognised by a controlled designation of origin as early as 1940.

XI. – Transitional measures

The parcels of vines in place on 31 July 2009 and not meeting the provisions relating to the minimum planting density and to the distance between rows or the spacing between plants within the same row continue to benefit, for their harvest, from the right to the controlled designation of origin until they are

grubbed up and at the latest until the 2038 harvest inclusive, provided that the foliage height makes it possible to have 1.40 square metre of external surface of plant cover for the production of 1 kilogram of grapes.

XII. – Rules of presentation and labelling

1° – General provisions

Wines for which, under the terms of the present specification, the controlled designation of origin "Condrieu" is claimed and which are presented under the said appellation may not be declared after the harvest, offered to the public, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid controlled designation of origin is entered.

2° – Particular provisions

a) – The labelling of the wines benefiting from the controlled designation of origin may specify the name of a smaller geographical unit, provided that: - it is a registered cadastral lieu-dit; - it appears on the harvest declaration.

b) – The labelling of the still wines benefiting from the controlled designation of origin may specify the larger geographical unit "Cru des Côtes du Rhône" or "Vignobles de la Vallée du Rhône". The conditions of use of the larger geographical unit "Vignobles de la Vallée du Rhône" are specified by the agreement signed between the various defence and management bodies concerned.

c) – The labelling of the wines not meeting the provisions making it possible to benefit from the term "dry" must bear the indications "medium-dry", "mellow" or "sweet" corresponding to the content of fermentable sugars present in the wine, as defined by Community regulations. On the labels, these indications appear in the same visual field as that in which the name of the controlled designation of origin is entered.

CHAPTER II

I. – Declaration obligations

1. Declaration of renunciation to produce

Every operator declares to the defence and management body, before 1 February preceding the harvest, the parcel(s) for which it renounces to produce the controlled designation of origin. The defence and management body transmits this declaration to the approved control body as soon as possible.

2. Claim declaration

The claim declaration is sent to the defence and management body at least fifteen days before the first bulk transaction or bulk sale to the consumer, or before the first packaging, and at the latest on 10 December of the year of harvest. It indicates: - the designation claimed; - the volume of wine; - the EVV or SIRET number; - the name and address of the applicant; - the place of storage of the wine. It is accompanied by a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for buyers of grapes and musts.

3. Declaration of bulk transaction or of bulk sale to the consumer and declaration relating to the dispatch outside the national territory of a non-packaged wine

A declaration of bulk transaction, or a declaration of bulk sale to the consumer, is sent to the approved control body at the latest ten working days before the date of exit from the cellars. This declaration specifies, where applicable, whether the non-packaged wine is intended to be dispatched outside the national territory.

4. Prior declaration of packaging

A declaration prior to packaging, for the blended wines ready to be packaged, is sent to the approved control body at the latest ten working days before the date scheduled for the first packaging.

5. Fallback (repli) declaration (marketing under a more general appellation)

Every operator marketing a wine benefiting from the controlled designation of origin under a more general appellation makes the declaration thereof to the defence and management body and to the approved control body simultaneously with the declaration of bulk transaction or of bulk sale to the consumer, where applicable with the declaration relating to the dispatch outside the national territory of a non-packaged wine, or with the prior packaging declaration.

6. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin makes the declaration thereof to the defence and management body and to the approved control body at the latest ten working days after this downgrading.

7. Declaration relating to the modification of the structuring elements of the parcels

Before any development or any works modifying the structuring elements (low walls, terraces, embankments, banks, etc.) of a delimited parcel, a declaration is sent by the operator to the defence and management body at least four weeks before the start of the envisaged works. The defence and management body transmits, without delay, a copy of this declaration to the services of the National Institute of Origin and Quality.

II. – Keeping of registers

No specific provision.

CHAPTER III

I – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A1 – Belonging of the planted parcels to the delimited area	Documentary checks and/or checks in the field
A2 – Claimable production potential (grape varieties, monitoring of transitional measures, planting density and trellising)	Documentary checks and/or checks in the field
A3 – Processing, ageing, packaging and storage facilities	
Place of vinification	Documentary checks
Identified storage place for the packaged products	Documentary checks and/or on-site checks
B – RULES LINKED TO THE PRODUCTION CYCLE	
B1 – Management of the vineyard. — Pruning	Checks in the field
Average maximum load per parcel	Checks in the field
Cultivation condition and other cultivation practices	Checks in the field
B2 – Harvest, transport and ripeness of the grapes. — Particular harvesting provisions	Documentary checks and/or checks in the field
Ripeness of the grapes	Documentary checks and/or checks in the field
B3 – Processing, elaboration, ageing, packaging, storage. — Oenological practices or treatments (enrichment, prohibited practices…)	Documentary checks and/or on-site checks
Stock accounts, traceability, etc.	Documentary checks
B4 – Harvest declaration and claim declaration	
Missing vines	Documentary checks (register keeping) and/or checks in the field
Authorised yield	Documentary checks

Claim declaration	Documentary checks
C – CHECKS ON THE PRODUCTS	
Non-packaged wines moving between approved warehouse keepers, at transaction	Analytical and organoleptic examination
Wines ready to be placed on the market for the consumer, before or after packaging	Analytical and organoleptic examination
Non-packaged wines intended for a dispatch outside the national territory	Analytical and organoleptic examination of all the lots

II – References concerning the control structure

National Institute of Origin and Quality (INAO)

Tel: (33) (0)1.73.30.38.00
Fax: (33) (0)1.73.30.38.04
Email: info@inao.gouv.fr

The check of compliance with the present specification is carried out by a third-party body offering guarantees of competence, impartiality and independence, under the authority of the INAO, on the basis of an approved inspection plan.

The inspection plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations. The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
