SPECIFICATION OF THE CONTROLLED DESIGNATION OF ORIGIN "COLLIOURE"

approved by decree no. 2011-1826 of 7 December 2011, JORF of 8 December 2011

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may benefit from the controlled designation of origin "Collioure", initially recognised by the decree of 3 December 1971.

II. – Geographical denominations and complementary terms

No particular provision.

III. – Colour and types of product

The controlled designation of origin "Collioure" is reserved for still red, rosé and white wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification, the elaboration and the ageing of the wines are carried out within the territory of the following communes of the Pyrénées-Orientales department: Banyuls-sur-Mer, Cerbère, Collioure and Port-Vendres.

2° – Delimited parcel area

The wines come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the session of the competent national committee of 19 May 2011. The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

3° – Immediate proximity area

a) – The immediate proximity area, defined by derogation for the vinification, the elaboration and the ageing of the wines, is made up of the territory of the following communes of the Pyrénées-Orientales department: Argelès-sur-Mer, Laroque-des-Albères, Montesquieu-des-Albères, Palau-del-Vidre, Saint-André, Saint-Génis-des-Fontaines, Sorède, Villelongue-dels-Monts.

b) – The immediate proximity area, defined by derogation for the ageing of the wines, is made up of the territory of the following communes of the Pyrénées-Orientales department: Cases-de-Pène, Elne, Ortaffa, Prats-de-Mollo.

V. – Grape varieties

The grape varieties are understood as those of all of the parcels of the holding producing the wine of the controlled designation of origin, for the colour considered.

1° – Grape varieties

The wines come from the following varieties:

COLOUR OF THE WINES	GRAPE VARIETIES
Red wines	- main varieties: carignan N, grenache N, mourvèdre N, syrah N; - accessory varieties: cinsaut N, counoise N.
Rosé wines	- main varieties: carignan N, grenache gris G, grenache N, mourvèdre N, syrah N; - accessory varieties: cinsaut N, counoise N.
White wines	- main varieties: grenache blanc B, grenache gris G, macabeu B, marsanne B, roussanne B, tourbat B, vermentino B; - accessory varieties: carignan blanc B, muscat à petits grains B, muscat

	d'Alexandrie B.

2° – Proportion rules on the parcel

The proportion of the accessory varieties muscat à petits grains B, muscat d'Alexandrie B is less than or equal to 5 % of the total grape varieties of a same parcel.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density.

GENERAL PROVISIONS

The vines present a minimum planting density of 4,000 plants per hectare. These vines may not present a spacing between rows greater than 2.50 metres. Each plant has a maximum area of 2.50 square metres. This area is obtained by multiplying the inter-row and plant-spacing distances within the same row.

PARTICULAR PROVISIONS

For the vines planted in a square or in a quincunx, each plant has a maximum area of 3 square metres. This area is obtained by multiplying the inter-row and plant-spacing distances within the same row. The spacing between rows and the spacing between plants within the same row is less than or equal to 1.70 metre. The vines planted on terraces may present a maximum spacing of 2.50 metres between the crest of the bank or of the low wall and the first row of the upper terrace, as well as between the foot of the bank or of the low wall and the first row of the lower terrace.

b) – Pruning rules.

GENERAL PROVISIONS

The vines are trained in goblet, fan, on stakes (échalas) or in Royat cordon. They are pruned by short pruning with a maximum of 7 spurs per plant. Each spur bears a maximum of 2 free eyes. Pruning is carried out at the latest on 31 March. However, the services of the National Institute of Origin and Quality may grant a derogation in the event of exceptional meteorological conditions, of serious family problems or of tenancies taken over late.

PARTICULAR PROVISIONS

The syrah N variety may be pruned by single Guyot with a maximum of 8 free eyes per plant. The grenache blanc B, grenache gris G and grenache N varieties may be the subject of a pre-pruning with a number of free eyes per spur greater than 2, subject to the vines being pruned, by 31 March at the latest, in accordance with the general provisions.

c) – Trellising rules and foliage height.

TRAINING OF THE VINE	TRELLISING RULES AND FOLIAGE HEIGHT
Vines trained in Royat cordon.	- The lower trellising wire is at a maximum of 0.60 metre above the level of the ground; - the trellising comprises 2 levels of wires, of which at least one level of lifting wires.
Vines trained in the "raised single-plane trellising" mode.	The height of the trellised foliage, after topping, must be at least equal to 0.45 times the spacing between rows, the height of trellised foliage being measured between the lower limit of the foliage, established at least 0.30 metre above the ground, and the upper topping limit, established at least 0.20 metre above the upper trellising wire.
Other training methods.	The length of the shoots, after topping, is greater than or equal to 0.60 metre.

d) – Average maximum load per parcel.

The average maximum load per parcel is fixed at 6,500 kilograms per hectare, with a maximum of 1.6 kilogram per plant.

e) – Thresholds for missing vines.
- The percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 20 %; - for the vines whose planting density is greater than or equal to 5,000 plants per hectare, the percentage of dead or missing vine plants, referred to in Article D. 645-4 of the Rural and Maritime Fishing Code, is fixed at 30 %.

f) – Cultivation condition of the vine.
The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of its soil.

2° – Other cultivation practices

In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir: - On the parcels fit for the production of the controlled designation of origin, the water-circulation-control developments and the structuring elements making it possible to guarantee the integrity and the durability of the soils (low walls, terraces, banquettes…) are maintained, according to the usages, by means making it possible to guarantee the integrity and the durability of the soils, as well as the preservation of the characteristic elements of the architecture of the vineyard, by using traditional materials; - only the developments or works that do not bring a substantial modification of the structuring elements making it possible to guarantee the integrity and the durability of the soils (low walls, terraces, banks, banquettes…) of a parcel of the delimited parcel area are authorised; - the control of the spontaneous vegetation is carried out, between 1 September and 1 March, either by a soil tillage or by equipment ensuring a precise localisation of the treatment products.

3° – Irrigation

Irrigation is prohibited.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

a) – The wines come from grapes harvested at proper ripeness. The date of the harvest is defined individually on the parcel or the cultivation block according to the ripeness and the sanitary condition of the harvest.

b) – Particular harvest provisions. - The wines come from grapes harvested manually; - the sanitary sorting of the harvest is compulsory whenever the harvest visually presents a degraded sanitary condition or an insufficient level of ripeness; this sorting is carried out by the operator either at the parcel or at the cellar.

c) – Particular provisions for the transport of the harvest. - During the transport of the harvest, the grapes are neither crushed nor packed down; - the containers holding the harvest intended for the production of the white wines may not hold a height of grapes greater than 0.60 metre during the transport of this harvest from the vine to the vinification cellar; - the harvest is transported in conditions permitting the maintenance of its qualitative potential.

2° – Ripeness of the grapes

The sugar richness of the grapes and the natural alcoholic strengths by volume meet the following characteristics:

COLOUR OF THE WINES	MINIMUM SUGAR RICHNESS OF THE GRAPES (grams per litre of must)	MINIMUM NATURAL ALCOHOLIC STRENGTH BY VOLUME
White wines	207	12 %
Rosé wines	198	11.5 %
Red wines	207	12 %

VIII. – Yields. – Entry into production

1° – Yield

The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 40 hectolitres per hectare.

2° – Limit yield

The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 48 hectolitres per hectare.

3° – Entry into production of young vines

The benefit of the controlled designation of origin may be granted to wines coming from: - parcels of young vines only from the 3rd year following that in the course of which planting was carried out in place before 31 July; - parcels of young vines only from the 2nd year following that in the course of which grafting in place was carried out before 31 July; - parcels of vines that have been top-grafted, at the earliest in the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages.

a) – Blending of the varieties.

COLOUR OF THE WINES	PROVISIONS FOR THE BLENDS
White wines	The wines come from the blending of grapes, of musts or of wines in the same proportions as those provided for the grape varieties.
Rosé wines	The wines come from the blending of grapes, of musts or of wines arising from at least 2 varieties.
Red wines	The wines come from the blending of grapes, of musts or of wines arising from at least 2 varieties.

b) – Malolactic fermentation.

The malic acid content of the lots of red wines ready to be marketed in bulk or packaged is less than or equal to 0.4 gram per litre.

c) – Analytical standards.

The lots of wines, ready to be marketed in bulk or packaged, present a content of fermentable sugars (glucose and fructose) meeting the following values:

COLOUR OF THE WINES	MAXIMUM CONTENT OF FERMENTABLE SUGARS (glucose + fructose) (grams per litre)
Red wines (with natural alcoholic strength by volume less than or equal to 14 %)	3
Red wines (with natural alcoholic strength by volume greater than 14 %)	4
Rosé wines	4
White wines	4

d) – Oenological practices and physical treatments.

Any enrichment operation is prohibited.

e) – Prohibited equipment.
The use of continuous vinifiers, screw draining tables, continuous presses and centrifugal destemmers is prohibited.

f) – Vat capacity.
Every operator has a vinification vat capacity equivalent to the volume vinified during the previous harvest, at equal area.

g) – Upkeep of the cellar and equipment.
The cellar (floors and walls) and the vinification equipment present a good general condition of upkeep.

h) – Control of the temperatures.
The vinification cellar is equipped with a device sufficient for the control of the temperatures of the vinification containers for the elaboration of the rosé wines and the white wines.

2° – Provisions by type of product

COLOUR OF THE WINES	PARTICULAR PROVISIONS
Red wines	- The duration of maceration of the harvest (uncrushed, crushed or destemmed) is at least 5 days; - the wines are the subject of an ageing at least until 15 May of the year following that of the harvest.
White wines	- The settling (débourbage) is compulsory for the musts arising from the grenache gris G variety; - the wines are the subject of an ageing at least until 15 February of the year following that of the harvest.

3° – Provisions relating to packaging

For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging and, in this latter case, within a maximum time limit of fifteen days following the packaging. The analysis reports are kept for a period of 6 months from the date of packaging.

4° – Provisions relating to storage

a) – The operator demonstrates a place suited to the storage of the packaged products.

b) – The storage of the bottles is carried out in a specific, insulated and tempered place.

5° – Provisions relating to the movement of products and to placing on the market for the consumer

a) – Date of placing on the market for the consumer.
The wines are placed on the market for the consumer:

COLOUR OF THE WINES	DATE
Rosé wines	According to the provisions of Article D. 645-17 of the Rural and Maritime Fishing Code.
White wines	At the end of the ageing period, from 1 March of the year following that of the harvest.
Red wines	At the end of the ageing period, from 1 June of the year following that of the harvest.

b) – Period during which the wines may not move between approved warehouse keepers.
The wines may move between approved warehouse keepers at the earliest on:

COLOUR OF THE WINES	DATE
Rosé wines	1 December of the year of harvest.
White wines	15 February of the year following that of the harvest.

Red wines	15 May of the year following that of the harvest.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

The most southern vineyard of France is established between “mar i mont” (“sea and mountain” in the Catalan language), in a very rugged site, on steep hillsides where the altitude passes very rapidly from 917 metres at the Pic de Sailfort to 0 metre, at the seaside. The geographical area extends at the eastern extremity of the massif of the Albères, where the Pyrenees plunge abruptly into the Mediterranean Sea. It extends over the territory of 4 communes of the region of the Pyrénées-Orientales department christened “Côte Vermeille”, which are as many ports: Banyuls-sur-Mer, Collioure, Cerbère and Port-Vendres. Around these ports, it is bounded: - to the east, by the Mediterranean Sea; - to the south, by the Pyrenean crests, constituting the frontier with Spain; - to the north, by the piedmont of the Albères and the plain of the Roussillon; - to the west, by the Pyrenean summits. The uplift of the Pyrenees created a very tormented landscape, compartmentalised into a multitude of alveoli, of small amphitheatres and of belvederes that overlook the sea. The geological substratum is homogeneous, constituted essentially of beds of brown schists of the Cambrian. Vertically structured, these very fissured rocks are at the origin of poor soils having low water-retention capacities and presenting, according to the topographical situation, a certain variability in thickness. The parcels precisely delimited for the harvesting of the grapes are cultivated in terraces, up to 400 metres of altitude, very locally in the valley bottoms constituted by the alluvial, stony and free-draining ribbons of the watercourses such as the Baillaury, the Cosprons, the Douy or the Ravaner that drain the geographical area. The geographical area benefits from a very strong annual sunshine, greater than 2,600 hours, and from a Mediterranean climate, mild in winter, hot and dry in summer. The average annual temperature is 15 °C. It varies however with altitude. The thermal regime is marked by annual temperature ranges of low amplitude but experiences daily ranges often important. The average annual rainfall, less than 650 millimetres, also varies according to the altitudinal gradient. It is characterised by a regime too often violent and irregular, alternating long periods of summer drought and short rainy paroxysms in spring and in autumn. These last can be at the origin of phenomena of erosion and gullying of the soils that imposed cultivation in terraces. The climatic particularity remains however the wind, which blows nearly 200 days per year: - the “Tramontane”, a dominant north-west wind (130 days per year), violent and desiccating. Beneficial for cleansing the atmosphere of cryptogamic diseases, it often proves destructive by its mechanical effects on the young vine shoots in spring; it is also responsible for the propagation of fires in summer; - the sea wind, of east/south-east direction, favours the fresh and humid maritime incursions that come to temper the summer solar ardour. Under this climate of excesses, the vine composes the landscape, alternating with meagre wooded spaces of cork or holm oaks, of olive trees, of Mediterranean shrubs and of moors resulting from the repeated passage of fires.

b) – Description of the human factors contributing to the link

The cultivation of the vine is linked to the history of the Phoenicians, who establish it from the port of Collioure some 7 centuries before Jesus Christ. The geographical and climatic context imposes very early cultivation in terraces, from the beginning of the Middle Ages, consolidated thereafter by the Templars. The trade in wine, flourishing from the ports, is encouraged by JAMES I of MAJORCA in 1207, then by the kings of Aragon, with in particular the retrocession, to the winegrowing communes, of a tax levied on the imported wines, in order to maintain the high quality of the local production. At that time, the wine is above all dry, often “fortified” by the addition of alcohol or naturally sweet. Thanks to its high alcoholic strength by volume, it “travels” very well and acquires a great notoriety in the courts of Aragon, of Castile, of the kings of Majorca, then, later, from Collioure, by crossing the Strait of Gibraltar, in Flanders. After the annexation of the Roussillon by France, in 1659 (Treaty of the Pyrenees), and to fight against the smuggling linked to the establishment by the State of taxes, the French troops prepare to intervene, in 1773. But the Intendant of the Province of the Roussillon finds a compromise, by granting bonuses for the planting of vines, to incite the smugglers to become winegrowers. But the tradition of the cultivation of the vine takes deep root thanks, in particular, to the practice of the “bail à complant” or “à souche morte”. This practice, whose origin goes back before the year 1000, endures in the vineyard of “Collioure” for more than 50 % of the vine parcels! This mode of land tenure has permitted people of modest condition to

exploit a few vine parcels whose plants belong to them, but without possessing the land. The latter remains the property of the landowners who cede their parcel in co-ownership, with the obligation that the plants always be alive. This favoured the regular replacement of the dead plants, with grafting in place from grafts that the producers considered the most "interesting". Furthermore, this practice induced, over the generations, the mix of varieties encountered within a same parcel. From 1830, everything is going to evolve very quickly. Trade, with the port of Port-Vendres, intensifies, the railway arrives as far as Collioure, then as far as Spain where the tracks present a different gauge. This leads to a considerable activity of handling to transship the goods. The population grows, attracted by the port and handling activity, and everyone, by "bail à complant", seeks to have access to a plot of vine. The wine elaborated within the geographical area benefits from this rise under the impulse of the commercial activity of the merchants of the region, but also of an ecclesiastic, the abbé ROUS, who develops a small trade in quality dry wine, in bottle, for the purposes of mass wine and for the restoration of the church of the commune of Banyuls, for lack of financing from the bishopric. This small trade, which prefigures the marketing of wines by direct sale, becomes so flourishing that the bishopric intervenes to make it cease. In 1885, the late phylloxera crisis annihilates a large part of the vineyard and adds to the difficulties that the producers encounter in the face of the competition of fraudulent wines. With the promulgation of the ARAGO (1872) and PAMS (1898) laws, which recognise a particular fiscal status for naturally sweet wines, the vineyard then specialises in the production of natural sweet wines, momentarily abandoning the reputation acquired for the dry wines with high alcoholic strength by volume. The dynamism of the producers leads to the recognition, as early as 1936, of the controlled designation of origin "Banyuls" for the natural sweet wines, but not for the dry wines "for risks of confusion". The dry wines are then marketed as "vins natures du terroir de Banyuls" until this denomination becomes obsolete, in 1960. The dry red wines are recognised, in 1971, as controlled designation of origin "Collioure", to avoid any confusion with the controlled designation of origin "Banyuls". The rosé wines and the white wines are recognised as controlled designation of origin, respectively in 1991 and in 2003. The vineyard covers, within the territory of the 4 communes of the geographical area, an area of 1,800 hectares. On this area are produced 20,000 hectolitres of natural sweet wines benefiting from the controlled designation of origin "Banyuls" and 20,000 hectolitres of dry wines benefiting from the controlled designation of origin "Collioure". The whole of this production is elaborated by some thirty private cellars that market their products directly, and 3 cooperative cellars, of which the most important is the "Groupement Interproducteurs Collioure Banyuls". The dry wines benefiting from the controlled designation of origin "Collioure" are declined into red wines (55 % of the production), rosé wines (30 % of the production) and white wines.

2° – Information on the quality and characteristics of the products

The red wines are coloured wines, with intense aromas often recalling ripe fruits and spices. They are generous, rich on the palate with a fine tannic presence that permits their good conservation. The rosé wines, which frequently present aromas of fresh fruits, are elegant, fresh, with a fine generosity. The white wines are appreciated for their volume on the palate and their slightly tannic note. They are rich, generous with aromas most often floral, sometimes honeyed.

3° – Causal interactions

In a very particular natural context of mountain and seaside, people adapted and sculpted a landscape, by installing the vine (for 2,000 years) on the abrupt slopes, which it colonises from the seaside up to 400 metres of altitude. Under a climate of contrast and of excesses, on unstable and free-draining soils composed of coarse elements, the successive generations laid out terraces that make it possible to fight against the erosion of the soils, but also against fires. There are thus counted, on the parcels classified within the delimited parcel area for the harvesting of the grapes, more than 5,000 linear kilometres of dry-stone low walls. These terraces, while correcting the slope, permit the conservation of the agronomic potentialities of the soil but are rarely mechanisable. Likewise, to slow the speed and the force of the run-off waters, the winegrower created a system to channel them, into stony gutters locally called "agouilles" that form characteristic networks in "cock's foot" or "peu de gall" in the Catalan language. Over the generations, in the most sheltered situations, people built a geometric mosaic of interlocked vines, confining the forest of holm oaks and cork oaks to the most abrupt ravines and to the most windy exposures. With the "bail à complant", a cultural heritage of Catalan history, the producers maintained the vineyard, and its diversity of grape varieties, demonstrating their faculty of adaptation to this difficult territory. On these sunny slopes, at the heart of a very dry climate, were selected, over the generations, the

most resistant black varieties, such as the grenache N variety, a rustic variety, resistant to water stress and to strong winds, mourvèdre N (also called “mataro”), carignan N and more recently syrah N in the most favourable situations, and the traditional white varieties, grenache blanc B and grenache gris G, locally macabeu B and muscat d’Alexandrie B, or more recent ones, marsanne B, roussanne B and vermentino B. The natural situations impose on the winegrower a rigorous management of the plant, reflected in short-pruning rules, a pruning apt to resist the extreme climatic conditions (a climate at once very hot and dry, but with very humid episodes, a strong maritime influence, and a violent wind) and ensuring a great longevity of the plants, by the practice of low yields indispensable to obtain an optimal natural sugar richness of the grapes. The average maximum load per plant is also limited to 1.60 kilograms, with a compulsory sorting if the sanitary condition of the harvest is degraded or the level of ripeness insufficient. The producers, conscious of having an exceptional natural environment, maintain this heritage with the greatest care. The specification requires that the water-circulation-control developments and the elements making it possible to guarantee the integrity and the durability of the soils (low walls, terraces…) be maintained according to the usages, and only the developments or works that do not bring a substantial modification of these elements are authorised. By keeping the tradition of manual harvesting of the grapes, the winegrowers contribute to preserving the originality and the characteristics of this vineyard of terraces. The producers have, on the one hand, tamed the strong slopes of the geographical area and, on the other hand, ensured the reputation and the trade of the wines, whose development is linked to the presence of maritime ports such as Banyuls-sur-Mer, Collioure and Port-Vendres. The wines express their identity and their originality by the sharing, within the community of producers, of the usages and know-how for the elaboration of dry wines, a traditional and ancestral production, by resting on the diversity of the grape varieties and of the natural situations. Over the generations, the operators have known how to extract the best from the grapes to produce, between sea and mountain, wines paradoxically fresh, rich and elegant, without being devoid of power, this also by adapting their vinification techniques. Very quickly, a period of ageing, after fermentation, became established to obtain red and white wines with complex aromas, but above all so that the tannins become round and silky. To reach these objectives, a minimum period of ageing is defined in the specification, at least until 15 May of the year following that of the harvest, for the red wines, and at least until 15 February of the year following that of the harvest, for the white wines. The recognition of the controlled designation of origin “Collioure”, in 1971, is the fruit of a historical and agronomic reality, with 2 controlled designations of origin, “Banyuls” and “Collioure”, produced on a same territory, from a raw material whose requirements of quality, ripeness and freshness are identical.

XI. – Transitional measures

1° – Training methods

a) – The vine parcels planted before the date of 31 July 2009 with a planting density lower than 4,000 plants per hectare, or whose spacing between rows is greater than 2.50 metres, continue to benefit, for their harvest, from the right to the controlled designation of origin, until they are grubbed up, subject to compliance with the provisions relating to the foliage height fixed in the present specification.

b) – The vine parcels planted in a square or in a quincunx at the date of 31 July 2009, with a spacing between rows and on the row greater than 1.70 metre and less than 2 metres, continue to benefit, for their harvest, from the right to the controlled designation of origin, until they are grubbed up, subject to compliance with the provisions relating to the foliage height fixed in the present specification.

XII. – Rules of presentation and labelling

1° – General provisions

Wines for which, under the terms of the present specification, the controlled designation of origin “Collioure” is claimed and which are presented under this appellation may not be declared after the harvest, offered to the consumers, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid appellation is entered.

2° – Particular provisions

a) – All the optional indications whose use, by virtue of the Community provisions, may be regulated by the Member States, are entered, on the labels, in characters whose dimensions, both in height and in width,

are not greater than those of the characters composing the name of the controlled designation of origin.

b) – The indication of the name of the variety is prohibited on the label.

CHAPTER II

I. – Declaration obligations

1. Prior declaration of parcel allocation

a) – Each operator declares, to the defence and management body, the list of the parcels allocated to the production of the controlled designation of origin before 1 February of the year preceding the harvest. This declaration is renewable by tacit renewal, except for modifications notified by the operator before 1 February preceding each harvest. This declaration specifies: - the identity of the operator; - the EVV or SIRET number; - the cooperative cellar(s) to which it is, where applicable, a supplier; - for each parcel: the cadastral reference, the area, the year of planting, the variety or the share of each variety if the parcel is planted with different varieties, the planting density, the spacings on the row and between rows. It is accompanied by a copy of the list of the parcels presenting a percentage of dead or missing plants, established in accordance with the provisions of Article D. 645-4 of the Rural and Maritime Fishing Code.

b) – The declaration of renunciation as provided for in the specifications of the controlled designations of origin “Banyuls”, “Banyuls grand cru” and “Grand Roussillon” is equivalent to a prior declaration of parcel allocation for the parcels respecting the production conditions of the controlled designation of origin “Collioure” and subject to being lodged before 15 August preceding the harvest, or until the start of the harvest in the event of a climatic accident.

2. Renunciation to produce

The operator may declare, to the defence and management body, the parcels for which it renounces to produce the controlled designation of origin, until 15 August preceding the harvest, or until the start of the harvest in the event of a climatic accident. This declaration specifies, for each parcel, whether it is intended for the production of a more general controlled designation of origin. The defence and management body transmits this declaration as soon as possible to the approved control body for the most general controlled designation of origin.

3. Claim declaration

The claim declaration is sent to the defence and management body before 1 February of the year following that of the harvest. It indicates: - the appellation claimed; - the volume of the wine; - the EVV or SIRET number; - the name and address of the applicant; - the place of storage of the wine. It is accompanied by a copy of the harvest declaration, and, where applicable, a copy of the production declaration or an extract of the stock accounts for the buyers of grapes and musts.

4. Prior declaration of bulk transactions or of removals

Every operator wishing to market in bulk a wine benefiting from the controlled designation of origin makes, to the approved control body and to the defence and management body, a transaction declaration for the lot concerned between the day of the contractualisation of the transaction and at the latest ten days before the removal. The lot is defined as a homogeneous whole arising from one or more containers. If the contracted volume is split into several lots and removed at different dates (more than one month apart), each removal is the subject of a different declaration.

5. Packaging declaration

Every operator wishing to package a wine benefiting from the controlled designation of origin makes, to the defence and management body and to the approved control body, a prior declaration of packaging for the lot concerned within a time limit of eight working days before the operation. The operators carrying out more than 12 packagings per year, distributed over the year across at least six months, are exempted from this declaration obligation, but send quarterly a summary declaration.

6. Declaration relating to the dispatch outside the national territory of a non-packaged wine

Every operator wishing to carry out a dispatch outside the national territory of a non-packaged wine benefiting from the controlled designation of origin makes the declaration thereof, to the approved control body, at least ten working days before the dispatch. The operator specifies the volumes concerned.

7. Fallback (repli) declaration

Every operator marketing a wine benefiting from the controlled designation of origin under a more general appellation makes the declaration thereof, to the defence and management body and to the approved control body, within a time limit of fifteen working days maximum after this fallback. The operator specifies the volumes concerned.

8. Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin makes the declaration thereof, to the defence and management body and to the approved control body, at the latest seven working days after this downgrading. The operator specifies the volumes concerned.

9. Declaration for the development or redevelopment of a parcel

Before any development or any works modifying the topography, the subsoil, the arable layer (including any addition of exogenous soil) or elements making it possible to guarantee the integrity and the durability of the soils of a delimited parcel, going beyond the classic deep-ploughing works, a declaration is sent, by the operator, to the defence and management body, within a time limit of at least four weeks before the start of the envisaged works. The defence and management body transmits, without delay, a copy of this declaration to the services of the National Institute of Origin and Quality. This declaration specifies: - the identity of the operator; - its EVV or SIRET number; - the cadastral reference and the area of the parcel(s) concerned.

II. – Keeping of registers

The following registers are filled in regularly and are kept available for the approved control body:

1. Ripeness monitoring

Ripeness-monitoring register with the reading of the sugar richness of the grapes per cultivation unit and the reading of the natural alcoholic strength by volume per container.

2. Register relating to the transitional provisions

List of the parcels being the subject of transitional provisions relating to the training method.

3. Cellar plan

List of the containers permitting in particular the number, the designation and the capacity of the containers to be identified according to the arrangements defined in the inspection plan.

CHAPTER III

I. – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A1 – Belonging of the planted (and allocated) parcels to the delimited area.	Documentary check and check in the field.
A2 – Claimable production potential (training method, entry of the vines into production, monitoring of the transitional measures).	Documentary check and check in the field.
A3 – Processing, ageing, packaging and storage facility. — Prohibited equipment.	Documentary check and on-site check.
Traceability of the packaging.	Documentary check and on-site check.

Place of storage suited to the packaged products.	Documentary check and on-site check.
B – RULES LINKED TO THE PRODUCTION CYCLE	
B1 – Management of the vineyard. — Pruning.	Check in the field.
Average maximum load per parcel.	Check in the field.
Other cultivation practices (upkeep of the water-circulation-control developments, developments or works on the parcels, control of the spontaneous vegetation).	Check in the field.
B2 – Harvest, transport and ripeness of the grapes. — Ripeness of the grapes.	Documentary check.
Height of the grapes in the bins.	Check in the field.
B3 – Processing, elaboration, packaging, storage. — Duration of maceration.	Documentary check.
B4 – Harvest declaration and claim declaration. — Authorised yield.	Documentary check.
C – CHECKS ON THE PRODUCTS	
Analytical standards at the stage of the transaction and of the packaging.	Documentary and/or analytical check.
At the stage of the transaction and of the packaging.	Organoleptic examination.
Non-packaged wines intended for a dispatch outside the national territory.	Analytical and organoleptic examination of all the lots.
D – PRESENTATION OF THE PRODUCTS	
Labelling.	Documentary check and on-site check.

II. – References concerning the control structure

National Institute of Origin and Quality (INAO)

The check of compliance with the present specification is carried out by a third-party body offering guarantees of competence, impartiality and independence, under the authority of the INAO, on the basis of an approved inspection plan.

The inspection plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations. The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
