SPECIFICATION OF THE CONTROLLED DESIGNATION OF ORIGIN "JURANÇON"

CHAPTER I

I. – Name of the designation

Only wines meeting the specific provisions set out below may claim the controlled designation of origin "Jurançon", initially recognised by the decree of 8 December 1936.

II. – Geographical denominations and complementary terms

1° – The name of the controlled designation of origin is compulsorily followed by the term "sec" for the wines meeting the production conditions fixed for this term in the present specification.

2° – The name of the controlled designation of origin may be supplemented by the term "vendanges tardives" (late harvest) for the wines meeting the production conditions fixed for this term in the present specification.

III. – Colour and types of product

The controlled designation of origin "Jurançon" is reserved for still white wines.

IV. – Areas and zones in which the various operations are carried out

1° – Geographical area

The harvesting of the grapes, the vinification, the elaboration and the ageing of the wines are carried out within the territory of the following communes of the Pyrénées-Atlantiques department: Abos, Arbus, Artiguelouve, Aubertin, Bosdarros, Cardesse, Cuqueron, Estialesq, Gan, Gelos, Haut-de-Bosdarros, Jurançon, Lacommande, Lahourcade, Laroin, Lasseube, Lasseubétat, Lucq-de-Béarn, Mazères-Lezons, Monein, Narcastet, Parbayse, Rontignon, Saint-Faust and Uzos.

2° – Delimited parcel area

The wines come exclusively from vines situated within the delimited parcel production area as approved by the National Institute of Origin and Quality at the sessions of the competent national committee of 11 and 12 February 2004 and of the standing committee of the competent national committee by delegation of 16 June 2011. The National Institute of Origin and Quality lodges with the town halls of the communes referred to in 1° the graphic documents establishing the parcel boundaries of the production area thus approved.

V. – Grape varieties

1° – Grape varieties

a) – The wines come from the following varieties: - main varieties: gros manseng B, petit manseng B; - accessory varieties: camaralet de Lasseube B, courbu B, petit courbu B and lauzet B.

b) – The wines liable to benefit from the term "vendanges tardives" come from the petit manseng B and gros manseng B varieties alone.

2° – Proportion rules on the holding

a) – The conformity of the grape varieties is assessed over all of the parcels of the holding producing the wine of the controlled designation of origin.

b) – The proportion of the main varieties is greater than 50 % of the grape varieties.

VI. – Management of the vineyard

1° – Training methods

a) – Planting density.

- The vines present a minimum planting density of 4,000 plants per hectare. Each plant has a maximum area of 2.50 square metres. This area is obtained by multiplying the inter-row and plant-spacing distances

within the same row. These vines present a spacing between rows less than or equal to 2.80 metres. - These provisions do not apply to the vine parcels planted on terraces. By vine parcels planted on terraces is meant a parcel benefiting from a particular development linked to the existing slope, carried out before the planting of the vine, this development entailing a discontinuity of the usual planting spacing and a non-passage of mechanisation between two successive levels. On at least a part of the parcel, the terrace presents a difference in level of at least 1 metre between two banquettes.

b) – Pruning rules.
The vines are pruned: - either by short pruning (trained in Royat cordon) with a maximum of 16 free eyes (buds) per plant; - or by single Guyot pruning, with a maximum of 16 free eyes per plant; - or by double Guyot pruning, with a maximum of 20 free eyes per plant. The number of fruit-bearing shoots of the year per plant, after flowering (phenological stage 23 of Lorenz), is less than or equal to: 12 for the vines trained in Royat cordon or pruned by single Guyot; 16 for the vines pruned by double Guyot.

c) – Trellising rules and foliage height.
The vines are compulsorily trained in "raised single-plane trellising". The height of the trellised foliage is at least equal to 0.55 times the spacing between rows. The height of trellised foliage is measured at the lower limit at 0.30 metre below the first bearing wire and at the upper limit at the height of the trellising. For the vine parcels planted on terraces, the height of trellised foliage is at least 1.55 metre.

d) – Average maximum load per parcel.
The average maximum load per parcel is fixed at 9,500 kilograms per hectare.

e) – Threshold for missing vines.
The percentage of dead or missing vine plants referred to in Article D. 645-4 of the Rural and Maritime Fishing Code is fixed at 20 %.

f) – Cultivation condition of the vine.
The parcels are managed so as to ensure a good overall cultivation condition of the vine, in particular its sanitary condition and the upkeep of its soil.

2° – Other cultivation practices

In order to preserve the characteristics of the physical and biological environment that constitutes a fundamental element of the terroir: - A plant cover of the headlands is compulsory; - the control of the spontaneous vegetation is carried out either by a soil tillage or by equipment ensuring a precise localisation of the treatment products.

VII. – Harvest, transport and ripeness of the grapes

1° – Harvest

a) – The wines come from grapes harvested at proper ripeness. The grapes intended for the elaboration of wines liable to benefit from the term "vendanges tardives" are harvested from 2 November.

b) – Particular harvest provisions. - The wines come from grapes harvested manually; - the wines come from grapes harvested by successive pickings (tries), with the exception of the wines liable to benefit from the term "sec"; - shrivelling (passerillage) off the vine is prohibited unless it is carried out at the heart of the parcel.

c) – Particular provisions for the transport of the harvest. The use of self-emptying bins equipped with a paddle pump is prohibited.

2° – Ripeness of the grapes

a) – The sugar richness of the grapes and the natural alcoholic strengths by volume meet the following characteristics:

CONTROLLED DESIGNATION OF ORIGIN, TERM	MINIMUM SUGAR RICHNESS OF THE GRAPES (grams per litre of must)	MINIMUM NATURAL ALCOHOLIC STRENGTH BY VOLUME

AOC “Jurançon” followed by the term “sec”	187	11.50 %
AOC “Jurançon”	- petit manseng B variety: 247; - other varieties: 230	14 %
AOC “Jurançon” supplemented by the term “vendanges tardives”	281	17 %

b) – Minimum acquired alcoholic strength by volume. The wines other than those liable to benefit from the term “sec” present a minimum acquired alcoholic strength by volume of 11.5 %.

VIII. – Yields. – Entry into production

1° – Yield

a) – The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 40 hectolitres per hectare.

b) – The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the wines liable to benefit from the term “vendanges tardives”, at 40 hectolitres per hectare.

c) – The yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the wines liable to benefit from the term “sec”, at 60 hectolitres per hectare.

d) – For the vines planted on terraces, the volume able to benefit from the controlled designation of origin results from the product between the area equal to the number of plants actually planted on the parcel concerned (N) affected by the area of 3 square metres and the yield of the controlled designation of origin (R in hectolitres per hectare), that is to say the formula (N × 3) × (R / 10,000). The area equal to the number of plants actually planted on the parcel concerned affected by the area of 3 square metres may not exceed the cadastral area of the parcel.

2° – Limit yield

a) – The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed at 44 hectolitres per hectare.

b) – The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the wines liable to benefit from the term “vendanges tardives”, at 44 hectolitres per hectare.

c) – The limit yield referred to in Article D. 645-7 of the Rural and Maritime Fishing Code is fixed, for the wines liable to benefit from the term “sec”, at 66 hectolitres per hectare.

3° – Entry into production of young vines

a) – The benefit of the controlled designation of origin may be granted to wines coming from: - parcels of young vines only from the 2nd year following that in the course of which planting was carried out in place before 31 July; - parcels of young vines only from the 1st year following that in the course of which grafting in place was carried out before 31 July; - parcels of vines that have been top-grafted, only from the 1st year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31 July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

b) – The benefit of the term “vendanges tardives” may be granted only to wines coming from: - parcels of young vines only from the 5th year following that in the course of which planting was carried out in place before 31 July; - parcels of young vines only from the 5th year following that in the course of which grafting in place was carried out before 31 July; - parcels of vines that have been top-grafted, only from the 5th year following that in the course of which the top-grafting was carried out before 31 July, and once the parcels no longer contain any varieties other than those permitted for the appellation. By way of derogation, in the year following that in the course of which the top-grafting was carried out before 31

July, the varieties permitted for the appellation may represent only 80 % of the grape varieties of each parcel concerned.

4° – Particular provisions

On a same determined area of vines in production, both the controlled designation of origin “Jurançon” followed by the term “sec” and the controlled designation of origin “Jurançon” may be claimed. The quantity declared per hectare in the controlled designation of origin “Jurançon” followed by the term “sec” is not greater than the difference between that liable to be declared in the controlled designation of origin “Jurançon” followed by the term “sec” and that declared in the controlled designation of origin “Jurançon” affected by a coefficient K. This coefficient is equal to the quotient of the yield authorised for the controlled designation of origin “Jurançon” followed by the term “sec” by the yield authorised for the controlled designation of origin “Jurançon”.

IX. – Processing, elaboration, ageing, packaging, storage

1° – General provisions

The wines are vinified in accordance with local, fair and constant usages.

a) – Blending of the varieties.
- The wines come from one or more varieties. They may not come from the accessory varieties alone; - in the blends, the main varieties are predominant.

b) – Analytical standards.
Every lot of wine marketed in bulk or packaged presents a content of fermentable sugars (glucose + fructose) meeting the following values:

CONTROLLED DESIGNATION OF ORIGIN, TERM	**CONTENT OF FERMENTABLE SUGARS (glucose + fructose)**
AOC “Jurançon” followed by the term “sec”	Less than or equal to 4 grams per litre
AOC “Jurançon”	Greater than 40 grams per litre
AOC “Jurançon” supplemented by the term “vendanges tardives”	Greater than 55 grams per litre

c) – Oenological practices and physical treatments.
- The wines liable to benefit from the term “vendanges tardives” are not the subject of any enrichment. - For the AOC “Jurançon” followed by the term “sec”, the wines do not exceed, after enrichment, the total alcoholic strength by volume of 14 %. - For the AOC “Jurançon”, the enrichment by dry sugaring or by rectified concentrated must may not have the effect of bringing the total alcoholic strength by volume after enrichment beyond 15 %. The enrichment by partial concentration of the musts intended for the elaboration of wines is authorised within the limit of a concentration of 10 % of the volumes thus enriched. It may permit the total alcoholic strength by volume to be brought to a level of 17.50 %.

d) – Prohibited equipment.
Continuous presses are prohibited.

e) – Vat capacity.
Every operator has a global vat capacity greater than or equal to 1.2 times the average volume declared in controlled designation of origin over the last five harvests.

f) – Overall upkeep of the cellar and equipment.
The cellar (floors and walls), the vinification and ageing equipment, and the packaging equipment present a good general condition of upkeep.

2° – Provisions by type of product

The wines liable to benefit from the term “vendanges tardives” are the subject of an ageing at least until 1 June of the second year following that of the harvest.

3° – Provisions relating to packaging

For each packaged lot, the operator keeps available for the approved control body: - the information appearing in the register of handling operations referred to in Article D. 645-18 of the Rural and Maritime Fishing Code; - an analysis carried out before or after packaging. The analysis reports are kept for a period of six months from the date of packaging.

4° – Provisions relating to storage

The operator demonstrates a specific place for the storage of the packaged products.

5° – Provisions relating to the movement of products and to placing on the market for the consumer

Date of placing on the market for the consumer.

a) – The wines are placed on the market for the consumer according to the provisions of Article D. 645-17 of the Rural and Maritime Fishing Code.

b) – The wines benefiting from the term "vendanges tardives" are placed on the market for the consumer from 15 June of the second year following that of the harvest.

X. – Link with the geographical area

1° – Information on the geographical area

a) – Description of the natural factors contributing to the link

The geographical area is located on the northern piedmont of the Pyrenees, in a sector of hills. The vineyard is relatively scattered but it marks the landscape because it is positioned essentially on the tops of the hillsides. From the geological point of view, the production area may be divided into three distinct sectors: - In the north-eastern part, the dominant rock is the Poudingue de Jurançon, a conglomerate with pebbles and calcareous cement whose outcropping part is altered and thus presents itself in the form of a stony clay. - To the south, the flysch dominates. It is a sedimentary rock constituted of alternations of hard beds (sandstone or calcareous) and soft beds (sandy or clayey). The formation of the Pyrenees tilted these layers with a dip towards the north. They thus form reliefs oriented east-west and therefore a succession of slopes facing south. - To the west, the geology is more diversified, with the presence of flysch, of the Poudingue de Jurançon, of summit layers with pebbles and above all of molasses. The associated soils most often present a clayey texture and a high stoniness, except on the north-facing slope where the silty fraction dominates owing to the loess deposits. The hard rocks structure the relief. The slopes are often strong even if the differences in level remain moderate. In the poudingue, the tops of the thalwegs form tight cirques. The climate is marked by a strong annual rainfall (1,200 mm) distributed in a homogeneous way without a dry season. The annual sunshine is average (1,900 hours). However, the hot and dry south wind, of the foehn type, blows in autumn and in spring (1 day out of 3 on average). Its role is fundamental: it dries the air and ensures a good ventilation; also, it increases the temperatures and the sunshine. The vines are set within a traditional mixed-farming-and-stock-rearing system, and rub shoulders with woods, meadows and crops. They often occupy the tops of the hillsides and the steepest slopes, thanks to plantings on terraces. The geographical area thus extends over 25 communes situated in the south of the Pyrénées-Atlantiques department, to the south and to the west of Pau.

b) – Description of the human factors contributing to the link

A mosaic representing vine leaves and bunches of grapes was found in an Aquitano-Roman villa at Jurançon. It is however very probable that the vineyard developed in the geographical area only during the 14th century, a period during which the increase of the population entails an important clearing and a development of agriculture on the partially deforested hillsides. The vine then establishes itself in specialised districts, in the proximity of the hamlets. The 15th century sees the increase of trade linked to the creation of important market towns (Gan, Monein) and above all to the development of the town of Pau. Indeed, the viscounts of Béarn settle there with a part of the bourgeoisie. They begin to buy vines in the Jurançon hillsides neighbouring Pau to satisfy the fashion that consisted in drinking the wine of one's own vine. Moreover, the privilege of the "vin de cru" made it possible to bring one's own wine into the town with reduced duties in order to market it. Thus in 1550, Henry II, the king of Navarre, and his daughter Jeanne d'Albret possess vines at Jurançon. The place that the vine and the wine hold in the For de

Béarn of 1551 (legislation enacted by Henry d'Albret), contrary to the previous fors, illustrates well the importance taken by the vineyard since the beginning of this century. The "Mansengue" variety is cited from the 16th century. The link between the Jurançon vineyard and Pau, then with the other neighbouring towns and regions (Oloron, Lescar, the Vallée d'Ossau), permitted the creation of large wine estates and the important development of the markets. They took a growing scale in particular through the action of the Kings of Navarre, established at Pau, who promoted the vineyard and the consumption of the wines of Jurançon at their court. At that time, the wines of Jurançon enjoy a great reputation in the Béarn but also in France, where they were classed among the best sweet wines. This reputation endures in the 17th and 18th centuries, a period during which the vineyard extends, following the increase of consumption. Thus, in 1640, Marca affirms in his "Histoire du Béarn" that: "the wines of Jurançon are of an exquisite goodness that surpasses the best of the Chalosse and of the Bordelais and consequently almost all France. The hillsides of the places neighbouring Jurançon, such as Gan, Gélos, Saint-Fos and Artiguelouve, produce wines of a goodness very little different". In the 18th century, the "petit manseng, gros manseng, camaralet and courbu" varieties appear in the writings of the Estates of Béarn. It is also in the 18th century that technical progress in the elaboration and the conservation of the wines makes it possible to envisage exports on a large scale. The Estates of the Béarn support the development of export markets towards Holland by the port of Bayonne. This market took a growing importance until the end of the 18th century. The area of the vineyard begins to regress with the arrival of the cryptogamic diseases and of phylloxera, but above all during the two world wars, going from 6,000 ha at the end of the 19th century to less than 600 ha in the middle of the 20th century. The remaining vineyard is recognised as controlled designation of origin for the sweet white wines in 1936 and for the dry white wines in 1975. The term "vendanges tardives" may supplement the name of the controlled designation of origin since 1995. The cooperative cellar of Gan was created in 1949 and permitted the survival of the numerous small agricultural holdings. It produces 60 % of the volumes of the appellation. Some sixty private cellars producing Jurançon are distributed over the whole of the area. The specialisation of the holdings towards the monoculture of the vine, non-existent at the beginning of the century, becomes more and more marked. The area of the vineyard grows at a regular rhythm for some thirty years and occupies, in 2010, about 1,200 ha.

2° – Information on the characteristics of the product

The wines are characterised by their vivacity. This acidity balances the alcohol and the residual sugars to give wines without heaviness and of a great freshness. Young, the aromas, above all fruity and floral, generally dominate, then often evolve towards more complexity with ageing, with the appearance of aromas of dried fruits and of spices in particular. The wines may evolve from a few years to several decades. The wines benefiting from the term "vendanges tardives", marked by the prolonged shrivelling (passerillage) of the grapes in autumn, present a great richness in residual sugars and more intense aromas. The high acidity also supports the dry wines and confers on them a great vivacity, well balanced by much richness. Some dry wines possess an ageing potential of a few years, while retaining freshness.

3° – Causal interactions

The particular geomorphology of the geographical area, with strong slopes and cirques where the vines are established, generates topoclimates very favourable to the ripeness and the over-ripeness of the grapes: sunshine, heat, low humidity, evacuation of the rainwaters by run-off. The local varieties are late and particularly well adapted to the general climate thanks to their thick skin. They thus present a good resistance to grey rot and a strong aptitude for over-ripeness. The south wind of the "foehn" type, which blows in autumn and which brings heat and dry air, greatly favours it. These varieties, demanding in terms of water supply, find in the Jurançon region predominantly clayey soils that suit them perfectly. By their practices consisting in favouring ripeness and shrivelling, by harvests by successive pickings, the winegrowers demonstrate a know-how adapted to the environment and to the varieties, and thus optimise the potential of their vine. They thus manage to transform climatic constraints into assets that permit them to elaborate original wines. The vineyard of Jurançon developed and acquired its notoriety thanks to its privileged link with the neighbouring town of Pau, former capital of Navarre. In a work published in Paris in 1575, François de Belleforest writes: "In Béarn is the district of Jurançon, renowned for the good wines that grow there and which equal in goodness the best that grow in France". Currently, the notoriety of the wines of Jurançon continues to develop at the national and international level while consolidating its regional image. The permanent qualitative research and the technical mastery of all the operators permitted

the recognition of this appellation. The exports towards the countries of the north of Europe, which began in the 18th century, still remain today the most dynamic.

XI. – Transitional measures

1° – Delimited parcel area

On a transitional basis and subject to meeting the other provisions of the present specification, the production arising from the parcels planted with vine excluded from the delimited parcel area of the controlled designation of origin, identified by their cadastral references and their area, and whose list was approved by the competent national committee of the National Institute of Origin and Quality at the session of 11 and 12 February 2004, continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up and at the latest until the 2024 harvest inclusive.

2° – Training method

The vine parcels in place at the date of 31 July 2009 and not meeting the provisions relating to the planting density or the provisions relating to the trellising rules continue to benefit, for their harvest, from the right to the controlled designation of origin until they are grubbed up, subject to the foliage height making it possible to have 1.40 square metres of external surface of plant cover for the production of one kilogram of grapes.

3° – Yield

The provisions referred to in point VIII 1° d) are not applicable to the vine parcels planted on terraces before the date of approval of the present specification, until they are grubbed up.

XII. – Rules of presentation and labelling

1° – General provisions

Wines for which, under the terms of the present decree, the controlled designation of origin “Jurançon” is claimed and which are presented under the said appellation may not be declared after the harvest, offered to the public, dispatched, put up for sale or sold unless, in the harvest declaration, in advertisements, on leaflets, labels, invoices and any containers whatsoever, the aforesaid controlled designation of origin is entered.

2° – Particular provisions

a) – The term “sec” is entered immediately following the name of the controlled designation of origin.

b) – The wines liable to benefit from the term “vendanges tardives” are compulsorily presented with the indication of the vintage.

c) – The wines benefiting from the controlled designation of origin “Jurançon” may bear on the labelling the term “Sud-Ouest”. This term is entered on the labels in characters whose dimensions are not greater than those of the characters composing the name of the controlled designation of origin.

CHAPTER II

I. – Declaration obligations

1° – Prior declaration of parcel allocation

Each operator declares to the defence and management body the list of the parcels allocated to the production of wines liable to benefit from the term “vendanges tardives” at least eight days before the harvest of the parcel(s) concerned. This declaration specifies in particular: - the identity of the operator; - the EVV or SIRET number; - the cooperative cellar(s) to which it is, where applicable, a supplier; - for each parcel: the cadastral reference, the area, the year of planting, the variety.

2° – Declaration of renunciation to produce

Every operator declares to the defence and management body and to the approved control body, before 31 March preceding the harvest, the parcels for which it renounces to produce the controlled designation of origin.

3° – Claim declaration

The claim declaration is sent to the defence and management body before 1 December of the year of harvest. It indicates: - the appellation claimed and, where applicable, the term; - the volume of the wine; - the EVV or SIRET number; - the name and address of the applicant; - the place of storage of the wine. It is accompanied by: - a copy of the harvest declaration and, as the case may be, a copy of the production declaration or an extract of the stock accounts for the buyers of grapes and musts; - the general plan of the place of storage of the wines, permitting in particular the number, the designation and the capacity of the containers to be identified according to the arrangements defined in the control plan.

4° – Prior declaration of transactions and of removals

Every operator wishing to market in bulk a wine benefiting from the controlled designation of origin sends to the approved control body a transaction declaration within a maximum time limit of eight days before the first removal being the subject of the said transaction. For the wines not removed within a time limit of one month after the transaction, a removal declaration is made for each of them within a time limit of at least eight days before it.

5° – Packaging declaration

Every operator packaging a wine of the controlled designation of origin makes to the approved control body a packaging declaration at least eight working days before the packaging. The operators carrying out more than twelve packagings per year are exempted from this declaration obligation, but send to the approved control body a declaration of intention of packaging at least eight working days before the first packaging.

6° – Declaration relating to the dispatch outside the national territory of a non-packaged wine

Every operator wishing to carry out a dispatch outside the national territory of a non-packaged wine benefiting from the controlled designation of origin makes the declaration thereof to the approved control body at least ten working days before the dispatch.

7° – Downgrading declaration

Every operator carrying out a downgrading of wines benefiting from the controlled designation of origin makes the declaration thereof to the defence and management body and to the approved control body within a time limit of one month maximum after this downgrading.

II. – Keeping of registers

1° – Register of monitoring of the parcels benefiting from transitional measures relating to the training methods

Every operator producing grapes keeps up to date the list of the parcels for which the transitional measures relating to the training method apply, as well as the parcels planted on terraces. The register is kept available for the approved control body.

2° – Register of the ripeness checks

Every operator producing grapes records the pre-harvest checks carried out on its holding. The register is filled in and kept available for the approved control body.

CHAPTER III

I. – Main points to be checked and evaluation methods

MAIN POINTS TO BE CHECKED	EVALUATION METHODS
A – STRUCTURAL RULES	
A.1. Belonging of the planted parcels to the delimited area.	Documentary check and in the field.

A.2. Claimable production potential (grape varieties and proportion rules, planting density and trellising, monitoring of the transitional measures).	Documentary check and in the field.
A.3. Processing, ageing, packaging and storage facility. — Place of vinification.	Documentary check.
Traceability of the packaging.	Documentary check and on-site.
Place of storage demonstrated for the packaged products.	Documentary check and on-site.
B – RULES LINKED TO THE PRODUCTION CYCLE	
B.1. Management of the vineyard. — Pruning.	Counting, at the parcel, of the number of fruit-bearing shoots per plant, from the phenological stage known as “flowering”, and check of the pruning method.
Average maximum load per parcel.	Counting of bunches and estimation of the load.
Condition of the vineyard.	Check at the parcel.
Parcels on terraces.	Check in the field.
B.2. Harvest, transport and ripeness of the grapes. — Particular harvest provisions (manual harvest, successive pickings).	Check in the field.
Ripeness of the grapes.	Documentary check and in the field.
Monitoring of the harvest date.	Documentary check and in the field.
B.3. Processing, elaboration, ageing, packaging, storage. — Blends.	Documentary check and on-site.
Oenological practices or treatments (enrichment, prohibited practices).	Documentary check and on-site.
B.4. Harvest declaration and claim declaration. — Missing vines.	Documentary check and in the field.
Authorised yield.	Documentary check and in the field.
VSI, volumes harvested in excess of the authorised yield.	Documentary check.
Claim declaration.	Documentary check and on-site.
C – CHECKS ON THE PRODUCTS	
Non-packaged wines at the removal.	Analytical examination and/or organoleptic examination.
Packaged wines.	Analytical and organoleptic examination.
Non-packaged wines intended for a dispatch outside the national territory.	Analytical and organoleptic examination of all the lots.
D – PRESENTATION OF THE PRODUCTS	
Labelling (term “vendanges tardives” and term “sec”).	Documentary check and on-site.

II. – References concerning the control structures

This control body is accredited by the COFRAC with regard to the criteria defined by standard NF EN 45011.

The check of compliance with the present specification is carried out by a third-party body offering guarantees of competence, impartiality and independence, on behalf of the INAO, on the basis of an approved control plan.

The control plan sets out the self-checks carried out by the operators on their own activity and the internal checks carried out under the responsibility of the defence and management body. It indicates the external checks carried out by the third-party body as well as the analytical and organoleptic examinations. The whole of the checks is carried out by sampling. Non-packaged wines intended for a dispatch outside the national territory are the subject of a systematic analytical and organoleptic check.
